4. Questions about ICR1500

Yahoo group: PCR1500
Date: 2006-05-10 13:35:00 UTC
From: antonioeres1
Topic: 4 Message: 4

Hello!

After reading about the R1500 I really would like to buy one, but haven't decided what is best suited for me, the R20 or the R1500.

One of my biggest concerns is to know if the software of the R1500 can
record a file with both the audio and the frequency associated when it stops on a search, or records just the audio.

The other question is about interference, we all know that the computer is a big source of noise. If the antenna is near the computer/receiver doesn't create a lot of birdies in the HF bands that
masks the signal on lots of frequencies? Is the HF reception acceptable only when the antenna is in the roof? Does the DSP help removing this computer type of interference on HF?

The last question, do I hear a background noise when using headphones
with the squelch closed/without a signal? Do I have to change the internal switch every time that I want to connect the headphones? If I
don't change what happens?

Many thanks in advance for your answers.
Mike

Topic: 4 Message: 5

I don't think you'll be too happy with the IC-R20. Numerous people have sold them shortly after buying them. Sensitivity, and gaps in coverage seem to be the biggest complaint. And as with any hand-held, they don't do well on HF due to practical antenna limitations.

I have the PCR-1500 and I am very satisfied with it. The supplied software only records the audio into one large .wav file, with no date/time/frequency stamps. What's nice is the audio is transferred though the same USB cable that is used for programming, and control. However, the spectrum analyzer has logging capability which might meet your requirements.

Interference is always an issue on HF. Having a HF antenna inside your house just compounds the problem, as there are numerous sources of interference generated by the average household that have ill effects on HF reception. Having that antenna in your computer room adds to the problem of course. The DSP feature is at the audio level, not the RF level, so it's effectiveness is also limited. Although it does help, it's not a miracle worker. If you're serious about HF reception, I would definitely recommend an outside antenna. Even a poor antenna outside will be better than a good antenna inside. It doesn't have to be much. Even a 20' piece of wire will do!

I haven't tried headphones yet, so possibly someone else will answer that question. You could leave the internal switch set to "headphones", and when not using them, play the audio though your computer speakers...again via the USB cable, rather than the external speaker jack. I also found if you play audio though an external speaker connected to the speaker jack, and at the same time, though your computer speakers via the USB cable, you will hear a slight reverberation effect due to a very tiny delay in the USB link. Actually for music it creates an interesting effect!

Bill Crocker

From: kiwi_zl
Topic: 9 Message: 9

I was wondering if it is possible to install an IC-PCR1500 in a remote location, close to the antenna, and use a wireless device to linkup the IC-PCR1500 USB port to your computer. I was thinking of using either Bluetooth or IEEE 802.11 (Wi-Fi) to establish such a connection.

I would appreciate feedback on such an option and guidance on typical hardware that I can use for the wireless connection.

The freeware "Ham Radio Deluxe" software should prove adaptable.
http://hrd.ham-radio.ch/
Remote capability is built in, beta versions are up to date and there's a forum for users where you might share thoughts on wireless connectivity.

Regards,

Fred.

Its USB right? so you might need a small PC/laptop and use VNC and some VOIP software like speakeasy. then you can hook to it -via/LAN/WIFI/serial etc.. dont think these RADIO remote control softwares are going to give you a USB bridge.

I did a simular thing with a winradio 1500e, instead of running some LDF450 to my radio room a 10m USB cable to the box on the antenna has no loss at all. maybe a Db or so for the jummper.

the idea bomb out because the 1500e gets overloaded ! AGHHHHH

Theres no way you can upgrade a 1500 to a 2500 without buying another
1500

As for soundcard which port are you using a Line-IN or Mic-IN

As far as the 2500 goes i wont be upgrading i'll keep my 1500 if
anything buy a second one (humm 2x 1500 = both radios scanning
50~3000 vs 2500 1x 0~1300 1x 0~3000) for about 100-200 difference

You may try it by SWLog as blow;

http://www.shortwavelog.com/default-english.html

It supports the PCR1500 from the latest version.
But I don't know about the NOAA frequency data....

21. New Web pages and Owners Manuals for IC-R2500/IC-PCR2500

Yahoo group: PCR1500
Date: 2006-06-07 16:01:18 UTC
From: ka1tiv
Topic: 21 Message: 21

ICOM Japan now has English Web Pages for the IC-R2500 and IC-PCR2500.

http://www.icom.co.jp/world/products...500/index.html

http://www.icom.co.jp/world/products...500/index.html

Also there are new PDF Brochures in English:

http://www.icom.co.jp/world/products/pdf/IC-R2500.pdf

http://www.icom.co.jp/world/products/pdf/IC-PCR2500.pdf

The Brochures are quite interesting.

There are also two new PDF Owners Manuals:

http://www.icom.co.jp/manual/externa...s/IC-R2500.pdf

http://www.icom.co.jp/manual/externa...R1500_2500.pdf

It appears that there are two sockets in the IC-R2500/IC-PCR2500 chassis,

so that both the UT-118 D-Star and the UT-122 P25 module can be
installed at the same time,

or the UT-108 DTMF module and the UT-122 P25 module can be installed
at the same time,

But the UT-108 DTMF module and the UT-118 D-Star module can not both
be installed at the same time.

Mark

23. Firmware and Software Upgrade for IC-R1500/PCR1500 (and IC-R2500/PCR2500)

Yahoo group: PCR1500
Date: 2006-07-26 21:15:46 UTC
From: ka1tiv
Topic: 23 Message: 23

Scott, (Scan Cape Cod), posted the following this morning on the Radio Reference ICOM Forum:

"I received a message from William/palacemuseum this morning, indicating that there is a firmware upgrade for these receivers. One of the upgrades listed is "Major Improved Function in P25 operation". Whether or not this addresses the 800 MHz issue remains to be seen, but the firmware upgrade is available at:

http://www.icom.co.jp/world/download/receiver.html

There also is a 2.01 software upgrade and some of the documentation indicates a requirement to update the software as well when the firmware upgrade is applied. It's nice to see Icom providing these updates, and it would be wonderful if this addressed the 800 MHz problem with P25.

PCR1500You're out of luck. There is no scanner in the world, or any other device for consumers, that will do EDACS digital.

1. Digital & EDACS
Posted by: "ve7ffp" rfry.7@... ve7ffp
Sat Nov 4, 2006 12:11 pm (PST)
Hi:

I live in Vancouver BC. All our emergency services, for the city & lower mainland are gradually being converted to Motorola Digital, EDACS trunked system. Will either the PCR1500 or 2500 work with it? I have a feeling that it will not so means buying 2 scanners, 1 like this & a digital trunk tracking one. ANy comments?

Thanks to one and all

Robin

29. Post a Picture of Your PCR Setup

Yahoo group: PCR1500
Date: 2006-11-14 19:22:40 UTC
From: Dave
Topic: 29 Message: 29

Hello members,

This is an invitation for you to post a picture of your PCR1500 receiver setup (your PCR2500, PCR1000, and PCR100, too). Show us your setup, whether it is in your car, your home, or wherever.
If you have taken apart your PCR unit to add modules or for some other reason and have taken pictures, include those as well.

To post a picture/pictures:

After signing in to the PRC1500 Yahoo group, click the Photos link to the left. Then follow these directions:

You can add a photo to an album by uploading one from your computer. Just follow these steps:

1. Click the Add Photo link and select an album.
2. To upload from your computer, click on the Browse button and find the image you want to upload. Once you find it, double-click on it or click on the Open button.
3. Provide a name and brief description for the photo.
4. Click the Add Now button. There may be some delay or lag time while your item is being sent to us, depending on the size of the file and the speed of your web connection.

You can upload as many as five pictures at once.

Notes

* If you choose to upload your photo into an album created by another member, you will not be able to edit or delete the photo, unless you are the moderator.
* Macintosh users: Make sure to add a file extension to the name of the item before you click on Add Now. For example, if your picture is a JPEG, add ".jpg" to the end of the name (e.g., "cowbell.jpg"). Remember, you must save your picture in the correct format (JPEGs only) before adding a file extension to it.
* If you have a digital camera, download the images to your hard drive and upload them using the same upload process.

How do I create an album?

1. Click the Create Album link.
2. Enter a name for your album.
3. Decide who will be allowed to access the images. You can specify the following options:
* Group - Any group member can add photos to this album.

* Personal - Only you and the moderator can add photos to this album.
* Click on Continue button to create the album and to add pictures to it.

34. Help Pardon Wrongly Imprisoned Border Patrol Agents

Yahoo group: PCR1500
Date: 2007-02-11 04:08:41 UTC
From: Dave
Topic: 34 Message: 34

2/10/2007

Two U.S. Border Patrol Agents are serving decade long prison terms for attempting to apprehend a known drug smuggler for illegally crossing our border with more than 700lbs. of drugs!

Almost as outrageous is that the illegal alien drug smuggler, who was given free medical care, and immunity for testifying against the agents is now suing the U.S. for $5 million--claiming his civil rights were violated!

And now, the Department of Homeland Security Inspector General and his investigators have admitted to lying to Congress about the incident, trying to prove their case against the two agents. They have admitted they do not have any evidence to back up the stories falsely accusing the two agents.

I have just signed a petition calling for the President to pardon these two Border Agents and I'm asking you to join with me by clicking here for the full story and the petition:

[url]http://www.grassfire.org/142/petition.asp?PID=12478561&NID=1[/url]

35. Help Please - No PC Audio?

Yahoo group: PCR1500
Date: 2007-03-22 04:25:06 UTC
From: cherisknight
Topic: 35 Message: 35

Hi, I'm new to computer-controlled scanner. I hooked up my new PCR-1500 tonight and I can hear audio through the unit's speaker, or through headphones out of the ext. speaker jack. However, when I try to switch to the PC Audio, I do not get audio through the computer speaker.

Do I need to hook up another cable from the ext. speaker jack to my sound card mic in jack?

I've checked the advanced settings for my soundcard and no inputs are muted.

Any ideas?

Thanks!
Sir Gareth

45. Newbie with a problem getting Scan to work on my PCR1500

Yahoo group: PCR1500
Date: 2007-05-17 09:51:05 UTC
From: Graham Wickens
Topic: 45 Message: 45

Hi All,

Firstly I am an Airband Scanner not a Radio Ham. This being my first venture into PC controlled radio I have become stuck at trying to get my PCR1500 to scan at all.
As I understand it, I right click on the MEMO button on the Meter/Scan panel, select current bank, tick SEL, tick MODE SEL, tick AM then click on red cross. Next I left-click on MEMO button and I should get a flashing MEMO to tell me the Receiver is scanning, but nothing happens.

The PC is talking to the PCR1500 as It works when I select one of the five frequencies that I have programmed into Bank 00 in MEMO 00 to 04. Squelch setting is set at 9 o'clock and works fine with the manually selected freqs.

So what am I doing wrong?

thanks in anticipation

Do you have the memories set up?

MEMO is used to scan a bank of defined memories eg. CB channel 1 to 40.
These are not just a start freq and end freq but individual channels
set up "within" a bank.

If you just want to scan say from 90.0 Mhz to 108.2 Mhz then you would
do that from the PROG button after setting a start and end freq.

My 2500 bandscope works in all modes are you sure the 1500 only works in AM ?

As for the orginal poster I have an Alinco scanner that is all mode wideband and that is as deaf as a post until I hook a G5RV up as the antenna and then I have to use the attenuator to get rid of some stations.

The handle here is Bill. Hopefuly I can contribute more to the group than I learn from it.Has anyone hooked their PCR 1500 to their PC with a USB cable other than the one that came with the radio. I ask this because I would like to set up my unit in such a way as to require a cable length of 2.5 to 3 meters. The operators manual tells us to only use the cable wich comes with the unit. I spoke to the ICOM people here , and they could not tell me why I can not use a longer cable. But they did tell me, they would not honour the guarantee if I used a cable other than the one furnished with the radio. I can't imagine that the unit is so insensitive as to require such a short USB cable. I would appreciate any input on this subject. 73's Bill

Hi Jerry,
I have a IC-R1500 since they first came on the UK market. Re USB cable length I use a 1 Metre when mobile and at home for monitoring, and a 3 or 5 Metre for programing from PC. Quality of cable is very important and it's route. You can use Line amp/buffer at each end and extend to <?. Manufactures Quote max length based on worst poss conditions using standard cable. The R1500 is a very good scanner and is very RF robust with 2MTR TX at the side of the R1500 on 2MTRs and both aerials 3 MTrs apart there is little spurious problems. Line out socket on back is handy for shipplotter as it outputs from the discriminator.
I have had the R1500 on a spectrum analyser and sweep generator and the spec as Icom Quote is exceeded.
All for now Steve

Hello Steve,

Did you manage to get any software other than the one from Icom to work on it? I just bought the R1500 as well but cannot connect to it with any legacy software such as TalkPCR, Hamradio Deluxe, not even with the Bonito 4.52 that came bundled with the radio. The USB port seems to be the bottleneck.

Regards,

Joerg.

57. The IC-R1500 DOES work with other software.

From: Michel Morin
Topic: 53 Message: 57

Hi there. As to using the IC-R1500 with software other than the one it came with, it does work nicely. I am using mine with MixW and everything works fine. The trick is to start the control software first and then put the radio on normally. After that, you start MixW and change the input source to the USB audio source in the menu and that's all there is to it. This should work with other software too. MixW is good for decoding a lot of protocols, about 15 different ones including cw. I am also using a longer USB cable than the one the radio came with and it works fine. My IC-R1500 is the Canadian model which has no gap in the receiving range. Good luck.
Mike.

Hello. Here in Canada, we don't get Radiocom with the radio. What we get is a program made by Icom called "Communications receiver" version 2.10 and that works quite well side by side with other software. You take control of the radio with this software and use the audio with any other program like MixW of TalkPC. I really don't know if another program can "control" the receiver. Hope this helps.
Mike VE2CJW in Canada..

The program SWLog and its Radio Control Server can control Pcr 1500
and 2500. It is possible to receive drm using this program using its
50k filter and usb.

Hello,

I am using the excellent software DIGISCAN EX:
20.07.07. Support of the ICOM IC-PCR1500 has been added. Download of
last update 2.01 is available at the Download page
http://www.digiscan-labs.com/download_e.html

Is someone using this software??

I need some help on configuration.

Also, i am interested to know if someone is using CENTURION from
Monteria.

Hi,

Can I ask you what antenna you use for HF listening? And also do you
use higher bands (VHF/UHF)?

If so, do you use a antenna duplexer or how do you switch antennae?

thanks
bernard

Hello.

I use two different antennas. The HF antenna is a kind of long wire with a matching network, see: (http://my.tbaytel.net/mccourts/homepage.html). It is designed for shortwave listening. For 25mhz an up, I use a discone. Both antennas have their own coax and I use a coax swticher near the radio. I get good results except for receiving NOAA17 satellite pictures. I will have to build or buy a QFH antenna or a turnstile for that. Take care.

Mike.

69. PCR1500 sound conflict

Yahoo group: PCR1500
Date: 2007-10-08 16:13:59 UTC
From: Chris Ten
Topic: 69 Message: 69

I have found the manual from Icon Inc. not always helpful
Presently I use the "built in" speaker of the PCR1500 but I loose all sound from computer speakers - for other programs - onces I've started the Icon application.
Even if I have closed the ap and/or turned off the Icon power - I have to reboot to get back sound from my computer.

Where can I look for a solution

Chris

Chris

Go into control panel
Select Sounds & Audio Devices
Click on audio tab

Maker sure you default audio is set to your sound card not the ICOM

BTW, make sure the ICOM is plugged in when you do this

74. IC-PCR1500 with SWLog?

Yahoo group: PCR1500
Date: 2007-11-05 16:46:17 UTC
From: henk_65
Topic: 74 Message: 74

Hello,

I'am trying to run SWLlog with the pcr1500, but i can't get it to work,
in the menu i have choose the 1500, and select the comport.
When i click a station then in the radio control server it changes, but
the 1500 does not change to the selected frequencie.
Somebody here who might have an idea what could be wrong?

Regards,
Henk.

75. ic-pcr1500 + Satellite + Doppler ???

PCR 1500 works fine for me with SWLog build 2751. It will only change frequencies from WPN. Do you get dots on the WPN map? You may have to add your home Longitude-Latitude and CIRAF Zones in SWLog settings.

I don't see any dots on the map.
I have entered longtitude 5.8 and latitude 52.5
After saving the preferences i still don't see any dots on the map.
When i look again in the settings the settings for longtitude is 58
and for latitude 526? maybe that could be the problem?

Henk.

81. Moderator Needed

Yahoo group: PCR1500
Date: 2007-12-12 07:11:21 UTC
From: Dave
Topic: 80 Message: 81

We need a moderator for the PCR2500
<http://groups.yahoo.com/group/PCR2500/> , PCR1500
<http://groups.yahoo.com/group/PCR1500/> , and RadioGear
<http://groups.yahoo.com/group/radiogear/> Yahoo Groups.

Desired qualifications:

1. A member of all three Yahoo groups (PCR2500
<http://groups.yahoo.com/group/PCR2500/> , PCR1500
<http://groups.yahoo.com/group/PCR1500/> , and RadioGear
<http://groups.yahoo.com/group/radiogear/>).

2. A former or current moderator of a Yahoo Group or other group site
or forum

3. A member of RadioReference.com

4. A licensed amateur radio operator (FCC call sign).

5. Command of the English language and English grammar (US preferred,
UK/Can acceptable). Some sort of spell check would help.

6. Frequently visits groups (at least twice a week, preferably more).

7. Ability to say "no."

8. Ability and desire to promote the groups to build interest and
membership.

9. Knowledge of basic HTML.

You do not have met all these qualifications, but please list the ones
you do posses. At first, one moderator will be chosen for all three
sites, then possibly one for each group at a later date. The chosen
moderator(s) will have full moderator privileges, as well as
responsibilities. The moderator will be chose within the next several
weeks.

Respond to this post if you are interested.

Thanks for the post, Jay. I am going to try it out. I don't listen to any trunked signals or whatever but the spectrum analyzer in there looks cool. Wonder how wide it can be set, maybe it would be useful to set UHF antennas and not have to click through all the stations after each tweak (not very easy when on the roof ...).

I've got the R1500 but I guess it should work with that one as well. Does the flash memory in the receiver have to be backed up before firing up this program? If yes, is there some software around to do that?

Regards,

Joerg.

87. PCR Remote version 0.66.035 Now Available

Yahoo group: PCR1500
Date: 2008-02-25 13:33:22 UTC
From: Jay
Topic: 87 Message: 87

PCR Remote version 0.66.035 Now Available for Downloading from homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

Backup Your Files first Before Installing This Update!!!
(PcrRemote.ini and PcrServer.ini)

For Users who have Sent a Donation, please send your Registraion Info
(Under the Help Menu) so I can create and send out your key file to set up
your new limits...

This update only has a few Additions, Changes & Fixes:
Feb 08,2008 - Fixed: Reduced COM Ports to 16 (Max Supported by MS COM
Control).
Feb 09,2008 - Added: Server PassWord to Control Access from Remote Users.
Feb 09,2008 - Added: Speed Governor on Knob Controls.
Feb 09,2008 - Added: COM Status LED's in Server Display.
Feb 12,2008 - Added: Load/Save Bank options to Server's File Menu.
Feb 12,2008 - Added: Load/Save Profile options to Server's File Menu.
Feb 19,2008 - Fixed: Reading Registry Items in Vista 64 Bit OS.
Feb 22,2008 - Added: External Display of DTMF Results.
Feb 23,2008 - Added: Duplex Frequency Offset.
Feb 24,2008 - Added: Scanning of All Banks.
Feb 24,2008 - -----: Increased Number of Scan Banks and Channels
According to Donation Ammount.
Feb 24,2008 - Added: Selection of Server in Client now Shows Correct
Associated Connection Port.
Feb 24,2008 - Fixed: Entering data in Server ComboBox or Port TextBox, No
longer entered in Frequency.
Version 0.66.035 Released 02/25/2008

Regards,
Jay

88. Help for a non-radio ham

Yahoo group: PCR1500
Date: 2008-04-14 16:27:03 UTC
From: Graham Wickens
Topic: 88 Message: 88

Hi All,

I only use my PCR1500 for Airband Monitoring and at the moment I cannot find how to knock a memory out of a "Memo" scan. I am getting stuck open-mike transmissions blotting everything out. Is there a way of temporarily removing stuck frequency from the list? The only way I can do it is to edit the frequency txt file .

thanks in anticipation

Hiya,
I only saw your message now.By now I hope you have found out what you wanted. In chase you haven't:

Go to the link below; at the top right section you will find the link to the Instruction Manual of the radio.

http://www.icomuk.co.uk/categoryRender.asp?categoryID=3510&cCID=5464

After you have downladed the .pdf Manual, go to page 25 (get an idea of available Scan types) and then scroll down to page 28 (Skip scan) where the Manual explains how to skip a memory channel while scanning.

I hope this helps,

Tim

90. Filter modification for IC-R1500

Yahoo group: PCR1500
Date: 2008-08-13 10:07:49 UTC
From: timopap
Topic: 90 Message: 90

Hi folks,

Has anyone successfully changed the very wide 2.8 kHz ceramic filter with anything more decent, e.g. 2.2 or 1.8 kHz filter.

I am looking for the best possible compromise so as to improve my CW reception as well.

Kind regards,

Tim

91. Re: What would cause no sound on HF radio freqs?

Yahoo group: PCR1500

From: timopap
Topic: 43 Message: 91

Hi

The IC-R1500 will mute when bandscope is on while receiving SSB, eg. on HF. This is due to an extra oscillator being needed for simultaneous SSB demodulation AND bandscope operation.

Is this different with the 2500 on HF (up to 30 MHz)?

If so that would be interesting, given that the R2500 doesn't have dual receivers covering HF, if I can remember well?

Kind regards,

Tim

92. USB Cable RFI

Yahoo group: PCR1500
Date: 2008-09-27 15:58:51 UTC
From: ourmaninvan
Topic: 92 Message: 92

I've just got my R1500. I love it, very powerful with lots of features which will take me about a month to learn!

However I'm a little disappointed by the RFI induced by the USB cable on the lower HF frequences 9Mhz and down (may be its my pc). I was surprised that the USB cable didn't have any snap on chokes. It makes using the unit in PCR mode pointless on those bands. Anything below 9Mhz is just noise.

Has anybody remedied this with ferrite beads? I don't want to splash out on lots of ferrite if the change is minimal. Does anybody here have decent lower HF performance while connected to their PC? Is any of this caused by a ground loop? I'm running the R1500 with the standard wall wart power supply.

I'm awaiting the arrival of a new Dell Mini netbook and will see if the RFI emitted by that is less than my desktop. Other than that the only option would be to rf choke everything that goes into the desktop computer?!

Sorry to hear you have this problem. I have my setup almost the same as you describe yours. The difference is i an using a 10' USB cable from my computer to the unit. I have the unit in a home made bracket on the back side of my desk and the computer under my desk on the far side. Maybe you are too close the computer or monitor. I have an LCD monitor. I use this on the road with my laptop and have no problems there using the factory supplied USB.
I know my response is of no help but to let you know I don't share the problem.

Can you describe the RFI that you are getting with your USB cable?
The cables are shielded and I have not noticed a big RFI on my
PCR1500.

Hi,
It is very likely that when you turn off the existing computer and connect your PCR 1500 to the Dell, all your problems will be solved.

From my experience, I bought my moterboard of choice, my tower of choice etc etc and assmebled my own PC back in 2005. Terrible interference when computer was on with most of the radios I tried

As soon as I bought a Dell laptop (Inspiron) and later a Vostro (tower), all the noises, itnerference, havoc, finished provided the old PC was turned off as well as the CRT Sony monitor...

However, because one doesn't get rid of a PC so easily (even if noisy), you may consider EARTHING your old computer. I went for a coax, connected it to a copper rod stuck in the ground and lots of the noise went, though not all of it ! Earth lead shouldn't be close to 1/4 of your interference wavelength..

Treat the PC like any RFI suspicious appliance. Maybe you could even use an RF sniffer if you want to go to such lengths and spot roughly wrhere the oscillations originate in your old PC. Often it it is cheap (non FCC compliant) power supplies..Disconnecting one by one all your peripherals and cards AND THE MONITOR, may help you track down the culprit.

Hope this helps,

Tim (M0SVA)

Hi ourmaninvan,
Is the USB cable the original that came with the Radio ?

When I got my Icom R1500 (Secondhand) it did not come with the USB cable and I had to go and buy one.

The USB cable I purchased was one with a clear cover. It has a wire mesh shield over the individual wires, but no ferrites.

I have not noticed any problems with PC (laptop) interference in the HF or any other bands. I find this surprising as I have problems HF interference with PC control on a number of other radios.

It can't help to try a ferrite to see if this helps.

The other thing I have found, is, it may pay to move the radio and the antenna wiring well away from the PC.

Cheers,
Mal (from OZ)

Topic: 92 Message: 97

Hi,

I can only relate my experience with the PCR1500. The real trouble started when I installed an IC703 transceiver to the same desktop PC as my PCR1500. My cures ended up being comprehensive as follows:

Throw away dimmer switch type table lamp in next room (very much RFI)
Change internal PC power supply to better quality filtered type
Fit ferrite rings to all power and data cables (see RSGB website)
Site a 'scanner type' antenna (e.g. Disc-Cone) as high as possible
Ensure RF earth (ground) is properly constructed and connected

I think that's about it, it didn't completely cure my problems but did minimise them.

The really odd thing was the PCR-1500 chucked out enough RFI to 'kill' the signal to the IC703, even after the above measures. It was spurious in its timing but once there could only be cured by turning off the PCR-1500. I am still working on this one owing to its 'phantom' timing.

Topic: 92 Message: 98

Thanks for the suggestions.

The RFI is just general noise, the noise floor just increases dramatically when hooked to my desktop machine via USB. I've managed to decrease the level a bit by unplugging unused USB accesories from the back of the machine, unplugging network connections also helps.

The cable supplied by icom is a purple clear cable, that seems pretty well shielded. I don't think proximty of the receiver is an issue, I have it out of the PC's sphere of influence. Again remember too this is only noise in HF. Also the RFI noise is only apparent once connected via USB, not when in remote mode using the controller head. An option here is to get a higher-end USB card installed into the PC, maybe the RFI/EMi filter on the built-in usb ports is not that great?

I've also added an RF choke to my antenna input, this helps a bit but knocks a few db off the signal. Also the transformer on the external pc speaker was creating a lot of unwanted bg noise. All of this has allowed the radio to be useful on general shortwave reception in HF but weaker signal stuff is impossible compared to using the unit with the remote head.

As for the Dell Mini 9 the noise on the USB is actually worse, way worse! Weirdly enough though connecting via the line out of the R1500 to the Dell mini 9s mic input is way better than the desktop PC.

My final course of action is to get the unit running off a 12V battery pack or a regulated DC supply. Does anybody already do this with ther PCR/R 1500? Any help/info/tips on what kind of battery pack/power supply is best would be greatly appreciated.

thanks.

Hi,
I think that reasonable solution is:
1-making a 10.7 mhz IF output (http://www.sm5cki.se/r2500mod/index.html)
2- A software defined radio which is connectted to the modified IF output

102. Default Band Plan - How to view

Yahoo group: PCR1500
Date: 2008-10-16 10:01:47 UTC
From: mal1958au
Topic: 102 Message: 102

Hi,
I hope this makes sense, I am looking to change the "default" band plan that my IC-1500 uses. (I am in Australia so I expect that it's a bit different).

(Band Plan setting is under "Setting", "Menu", "Automode", options - Default, Import, Export).

I however cannot see the default values to check how different they are from the information on Australia I have.

Can some-one advise how to view the default values ?

Cheers,

Mal (from Oz)

Thank you, Serdar.

The referenced article was very informative, but I don't think I can afford $500 for the additional hardware!

I (finally) referenced the PCR1500 manual (chapter 10) and learned how to record the output of the sweep data. I can then use my computer to do any data analysis. (The output from the receiver is a file in comma delimited format, which I can input directly into Excel for the simple work I need to do.)

Thank you again,

73 de Dave,
W9JWT

Static keeps taking out the front end of my r-1500.It has been back to icom twice now.I want to home brew soom static protection.Can I put somthing across the center conductor and to the chasis to ground off the static.This would be done on the inside of the radio. Chris NM3M

Static can build even in winter snow.
Spark gaps act too late to protect a receiver, diodes might save just once but there are other protections.

I'd first suggest a static bleed resistor between centre conductor and ground.
33k ohms quarter watt carbon should do the trick
Fred.

115. Re: web controlled receiver

Yahoo group: PCR1500
Date: 2008-11-30 19:51:13 UTC
From: ourmaninvan
Topic: 106 Message: 115

Remember there are two separate things you need to do.

1. Control the device via software or web based app

and

2. Stream the audio

PcrRemote will allow you to control the device but you still need to stream the audio with VLC or ShoutCast.

There are very few third-party apps for the PCR series because AFAIK Icom did not freely release the code to the developing community, unlike the Ten-Tec 320D, which has dozens of third party apps. Again I don't believe there is a web based app to control the PCR.

116. PCR on 13.8v power supply

Yahoo group: PCR1500
Date: 2008-11-30 19:57:56 UTC
From: ourmaninvan
Topic: 116 Message: 116

I know the input voltage on the PCR 1500 is rated at 12v +/- 15%. I am looking to get a bench DC power supply to run the unit. Most power supplies are rated at 13.8v. This is at the limit of the PCRs voltage range.

What would be the consequence of running the unit on a 13.8v DC power supply? Is this safe to do this? Would the PCR run hot? Would components more likely fail?

Any advice greatly appreciated

Dave

Yes Chris - 33k, 47k, 100k or more all ok - my suggestion was the simplest response to your question.
The value and rating of the bleed resistor needs just be such as to allow static to drain away but have least effect on signal or antenna matching. In fact large commercial antennas may use 1M high wattage resistors. Your receiver front end isn't best suited to large antennas. Whips (with a good ground) have advantages but can be bad for static build-up.
Regards,
Fred.

Referring to the PCR1k aerial input circuit, there are several resistors (e.g. R5 & R6 = 1 kohm) between the aerial connector and ground. Additionally, the gates of the 1st stage FET (e.g. Q8,Q9, Q10) are DC grounded via shunt inductors in their input matching networks or thru a gate bias resistor (2.2 kohm). Assuming that the PCR1k5 input section is electrically similar to the Pcr1k, is the 47k external resistor still necessary? An external resistor introduces parasitic capacitance which may degrade the sensitivity at uW. Please consider the possibility that the damage was caused by EMF induced by nearby lightning strikes and may require a more rigorous protection than a resistor (see OH5IY's excellent tutorial on this subject at www.kolumbus.fi/oh5iy/back/Ham%20Radio%20Lightning%20Protection.html).

Looking at the PCR1k aerial input circuit, I can find several resistors (e.g. R5 & R6 = 1 kohm) between the aerial and ground. Additionally, the gates of the 1st stage FET (e.g. Q8 or Q9) are DC grounded via shunt inductors in the input matching network or thru the gate bias resistor (2.2 kohm). Assuming that the PCR1k5 input section is similar to the Pcr1k, is the 47k external resistor still necessary? An external resistor introduces parasitic capacitance which may degrade the sensitivity above VHF. My concern is that it could be static induced by nearby lightning strikes and this will require a higher-level of protection (see OH5IY's excellent tutorial at www.kolumbus.fi/oh5iy/back/Ham%20Radio%20Lightning%20Protection.html).

Hi Leong,
Yes if a similar front end but static had obviously got through. On the PCR1K diagram see C1 - C4 (before those resistors you mention).
A simple static bleed resistor before any component directly addressed the question.

I'd think parasitic capacitance would be minimal compared to effects of antenna/cable connected.
The link wouldn't open - could you post it as a tinyurl please?
Regards,
Fred.

Betreff: RE: [PCR1500] Difference USA - INTERNATIONAL version

Hello Alex

I have a PCR1500 in Canada, it s an unblocked (International) Version, I bought in Canada. You cannot unblock directly the PCR1500, you must change the CPU in the PCR1500 by ICOM ;-)))

Matthieu

Subject: [PCR1500] Difference USA - INTERNATIONAL version

Hi
I see two versions of this scanner, here in EUrope you can get for over 500 Euros the international version and in Spain the USA version.
The USA version has blocked some frequency ranges.
How is it possible to unblock? Firmware update, MARS mod?
Tnx
73 Alex

Hi All,

Have used the PCR1500 with 400W Am AE 15MTRs from Wide-band AE and had no problems.
With regards Atmospheric static had up-to 400V spikes without problems, Did fit 2MR resistor from centre core of coax to earth system at point it enters house. To act as a bleed resistor to earth. This works with my location and set up using Dipole, long wire, active loops and active vertical.
Hope this helps.

73 Steve.

Keep in mind that Icom cannot sell the international version in the US
unless to a government body and only then with the appropriate paperwork.
Also I believe that Canadian distributors will not export to the US
without the proper paperwork.
Either way they would be breaking US law and could be subject to charges.

Maybe someone can help me with additional information. I just ordered a PCR-1500 and would like to know if the software disc that I get with it has the current software and firmware updates, or do I have to go to the Icom software site to download the current firmware and software? Thanks, John K3JK

You would most likely have to go to the ICOM website to download
firmware updates and updates for the ICOM supplied software.

hi all, John K3JK here. Have a question on the PCR 1500 I will be setting up my computer. Am I right to say that I do not have to install the old version of the software if I just want to put the updated software in? And if the new updated software has its own driver, I probably do not have to install the original driver with the old version of the software. IS this correct? thanks, John K3JK

That is correct, in fact you will be instructed to remove the older
version of the software before installing 2.12

I don't think the driver changed, but it's of no consequence in this
case.

I have just purchased the pcr1500 and used it with an earpiece plugged in without switching the "internal speaker switch" over - will this do any damage to the radio? Likewise can I use it with headphones through my computer without likelyhood of damage without changing the switch position as recommended in the manual?

136. TrunkPCR version 0.89.242 Now Available

Yahoo group: PCR1500
Date: 2009-01-11 03:37:11 UTC
From: Jay
Topic: 136 Message: 136

TrunkPCR version 0.89.242 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update has a few Additions, Changes and fixes...

NOTE: Moto Type-I Support should be finished in the next major update.

Feb 04,2008 - Fixed: Import Bank Showing "Read-Only Property" Error.
Feb 05,2008 - Fixed: Editing RadioID from Affiliation List.
Feb 05,2008 - Fixed: Editing Fonts for RadioID's.
Feb 08,2008 - Fixed: Reduced COM Ports to 16 (Max Supported by MS COM
Control).
Feb 09,2008 - Added: Speed Governor on Knob Controls.
Feb 19,2008 - Fixed: Reading Registry Items in Vista 64 Bit OS.
Feb 20,2008 - Fixed: Naming of Search Limt Bank after Inserting New Entry.
Feb 20,2008 - Fixed: Search Limt Bank Tab's Caption after Renaming
Description.
Feb 21,2008 - Added: Skip Known Frequencies in Search Limit Scan Banks.
Feb 22,2008 - Added: Search Limit - Saved Channels to Known Frequencies.
Feb 22,2008 - Fixed: Sub Receiver's "Increment Frequency" using Limit
Search.
Feb 22,2008 - -----: Changed how Search Limit Results are saved.
Feb 22,2008 - -----: Known Frequencies are now ReLoaded after a channel is
deleted.
Mar 02,2008 - Fixed: Setting Search Limit Tab descriptions when Loading a
Different Profile.
Mar 14,2008 - Added: Importing Other Radio Formats now include
Volume,Squelch,IF Shift settings.
Mar 22,2008 - Added: LTR Decoding (Not decoding 100% yet).
Apr 05,2008 - Added: Auto-Connect at Startup.
Apr 06,2008 - Added: Saving BandScope's Follow Active Freqs & Identify Known
Freqs settings.
Apr 06,2008 - -----: BandScope's Follow Active Freqs & Identify Known Freqs
settings Set at Startup.
Apr 06,2008 - -----: Importing Corrected Talkpcr Fql files.
Apr 12,2008 - Added: AFC, AGC, ATTN, NB, VSC and DSP settings Saved for each
Channel.
Apr 13,2008 - Added: Channel Display Grid that allows editing of channel
settings.
Apr 16,2008 - -----: AFC Menu now only enabled in 6kHz/15kHz FM.
Apr 18,2008 - Added: Duplex Offset Frequency setting for All Channels.
Apr 18,2008 - Fixed: Windows Height Adjustment for Vista PC's.
Apr 25,2008 - Fixed: Bank Info Saved when Channel Lock-Out is changed.
Apr 25,2008 - Added: Display of AFC, AGC, ATTN, NB and VSC settings in
StatusBar.
Jul 25,2008 - -----: Changed how the Control Channel Activity Window is

created.
Jul 25,2008 - Fixed: Keyboard shortcuts now work when CCA Window is displayed.
Jul 31,2008 - Added: Running History of Group Calls.
Jul 31,2008 - Added: Running History of Radio Affiliations.
Jul 31,2008 - -----: Inactive Frequencies now cleared when not in use for 5 seconds.
Jul 31,2008 - -----: Inactive Patches now cleared when not in use for 5 seconds.
Jul 31,2008 - Fixed: Faulty display of "Radio Unknown" Decription.
Aug 10,2008 - Fixed: Channel Hit Counter for PCR-1500 & 2500's main receiver.
Aug 10,2008 - Fixed: When De-Activating a TrunkBank, the User Picture is only hidden if the TrunkBank was active.
Nov 26,2008 - Fixed: Group Alerts now display correct Group Color.
Nov 26,2008 - Added: Abort Alerts on Group Alert Display.
Dec 02,2008 - Added: Running History of Active Control Channel Use.
Dec 06,2008 - Added: Inactive Frequency and Patch TimeOuts in Trunk Settings.
Dec 07,2008 - Added: Abort Alerts on Radio Alert Display.
Jan 03,2008 - Added: Find and Replace for Group/Radio Description in Affiliation List.
Version 0.89.242 Released 01/09/2009

Regards,
Jay

Topic: 138 Message: 138

hi everybody from SPQR, Roma, Italy :-)

im waiting for unblocked R1500+UT106 so i've some questions..

what's the best software to use ? is there a waterfall screen or similar?

i read on a monitoring times review (jul/aug 06) that 25ch. monitor function doesn't switch an active channel, just blink or turns red, so we have to click on that to listen, stopping the scan.. i can stand this but may i monitor 25 channel using just the controller head, far from computer?

what i have to do tu use the r1500 in my car? or...thus i haven't the 220V adaptor, may i use a normal 220V adaptor that gives 13.5V ? or 12 ?

10x :-)

139. Using PCR1500 to aim cell antenna...

Yahoo group: PCR1500
Date: 2009-02-28 17:32:21 UTC
From: fgmoore1950
Topic: 139 Message: 139

I live in the mountains in a remote area of northern California. Landlines are not a given, and the last of the analog cell signals just finally went away. I am looking to help out some of my neighbors with aiming new antennas. Does anyone have advice regarding frequencies and setup to optimize these installations? Yes, I have an open PCR1500,and no, I have no interest at all in monitoring cell traffic. TV and the current news do not hold my attention for long either.

I have worked for many hours trying to find the frequencies for the local cell channels. At this point I am convinced that I either do not know the proper setup - or the signals at my location are too weak for the receiver. My next step is to go to the closest strong cell area and get my setup configured properly.

Thanks for any help with this.

Hi Dan,
I have had a PCR-1500 since they came out in the UK and There should be very little if eny RFI radiated from the monitor head or lead. Is the noise broad band or only parts of the spectrum?

With regards Steve.

Dan,

My guess would be a bad monitor, I have 5 LCD's in my HamShack and none cause a problem for me

As you can see from the picture below, the PCR-1500 is surrounded by LCD's (without a problem)

http://www.n3ujj.com/hamshack/HamShack1024.jpg

Where is your antenna in relation to the LCD?

The only thing I wish I could do is control it with Ham Radio Deluxe <http://www.ham-radio-deluxe.com/>

Hi Dan,

Is your Monitor still under warranty ? If so talk to someone about the problem, even replace or refund ?

Shielded/Grounded / Relocated Monitor + cables. Also orienation of all involved wires/cables ? Right angles, if you know what I mean.

Having the remote head for the PCR1500 could make you less dependent on the monitor.
I am happy with an Acer LCD monitor that got from Argos to replace a noisy CRT Sony monitor that would bust my HF reception.

Good luck,

Tim

Hi all,
Have big problem with my pcr15k. It has lost SSB detection.
What happens, when you switch to SSB/CW it sounds like if you are still in AM mode, also volume is down as well when you switch. Checked the SSB/CW detection circuit and the voltages are all correct.
Any ideas what it could be would be appreciated.
Cheers Steve

151. PCR-1500 remote controlled

Yahoo group: PCR1500
Date: 2009-08-31 20:17:50 UTC
From: ciprian_sufitchi
Topic: 151 Message: 151

Hello,

I just got thir PCR-1500 and I thought it would be easy to control the base remotely since there is only one USB connection to the host computer. Well, it is not. At least to me.

First thing I tried was to open a Win Remote Desktop over the internet. Apparently the port(s) are not correctly forwarded from the host to the remote computer and the IC-PCR1500 software does not work in the remote Windows session if one wants to listen to the audio over the internet. Without remote sound support, Remote Desktop allowed me to control the PCR.

Next thing was to open Remote Desktop, leave the sound on the host computer and do a audio card streaming over the internet. After a few attempts that worked ok so I was able to see the control panel in the Remote Desktop and listen to audio in streaming mode. However there is a significant delay (5-10 seconds) between the radio actions (change frequency, change filters etc) and the sound associated. That really bothers.

The last thing I tried tonight was to create a Vitual USB over the network, like an "extension" of the USB cable connecting PCR-1500. That would be the most elegant solution. The remote computer would see the USB port as if was physically connected to that computer so the control software could work locally, with sound and everything. The problem in this case was to find that piece of software to do the USB forwarding over the network. Most of the software is not free and the demo versions are having many limitation. I really liked Remote USB and USB @nywhere but they failed to work correctly to me.

Instead of playing with different configuations I tought I may ask on this Forum if there is a standard solution to listen and control a PCR-1500 remotely, cost effective (free?) and with minimum software required.

Thanks!
73s de Chip N2YO

Hi,
You can use "remote pcr" for controlling your PCR. You can find detailed information and sofware from:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html
This program only controls your PCR remotely. You need windows media encoder, or shoutcast for streaming the audio.

Is there something similar that runs on Linux? I need to control the PCR1500 at our repeater site, but we don't allow any windows systems at the site.

I can deal with streaming the audio. I just want to control the PCR1500.

Many thanks all.

Mike

Hi,
You can use "remote pcr" for controlling your PCR. You can find detailed information and sofware from:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html
This program only controls your PCR remotely. You need windows media encoder, or shoutcast for streaming the audio.

Many reasons.

· Security. As Linux is opensource, we can ensure their security

· Windows boxes are a target of hackers (much more than Linux). If you were a hacker, you want to get the best bang you can for your buck

· Performance. Linux has better performance numbers than windows (from my own professional experience, it takes about a 3 windows boxes for every 1 linux/sun box)

· Remote dialin, etc. Yes, there are tools that you can use for windows remote access, but Linux/Unix is just better designed to do that with much less overhead

· Personal and professional proof that linux boxes just run much longer without paying attention to them J

· Debugging logs – linux ones are just much more informative

· Windows makes a good desktop. Linux is much better in a production role.

Not that I have an opinion! LOL.

Mike VA3MW

Yes, my remote base is on Windows-but I have no other choice at this moment. But, the moment I do…..

Yes - I can see why Linux has a following including the Unix devout but count myself among the throngs of those too used to Windows (bloat, bugs, warts and all). It may be more perceived than actual but Linux seems too much a transition and learning curve.
I'd surely be shunned at your site ;-(

No, if I went down that route, I would run in a VMware image. I would prefer a native solution that I could stick in with the 2 linux boxes up there (IRLP and DSTAR). I would not like to add a third.

So, what I am hearing is that there isn't a linux version.

Thanks

PCR Pro version 1.14.259 Now Available for Downloading from homepage:
http://members.cox.net/fifty.50/PcrPro/PcrProDwnld.html

This update has a few Additions, Changes and fixes...

Jul 19,2009 - Added: ByPass External Speaker Plug-In Notification for PCR-100 (*** Not Recommended ***).
Jul 31,2009 - Added: New Item under Help Menu, Launch Web Browser to RadioReference.com...
Jul 31,2009 - Fixed: Changing Bank in Timed Recording now wraps to start/max Bank.
Jul 31,2009 - Fixed: Changing Channel in Timed Recording now wraps to start/max Channel.
Jul 20,2009 - Added: When Turning OFF Power Button, a check is now made to see if the COM Port is Still Available.
Aug 10,2009 - Fixed: Timed Recorder Auto Start / Stopping.
Aug 10,2009 - Added: CSV Bank Import.
Aug 11,2009 - -----: Timed Recording can now be stopped by Un-Checking Enable CheckBox.
Aug 11,2009 - -----: Sound Recorder won't be shown if Timed Recording in Progress.
Aug 11,2009 - Added: Delete Wave File Button in Sound Recorder.
Aug 12,2009 - Fixed: Recording Device ID now used when checking WaveFormat in Sound Recorder.
Sep 28,2009 - -----: Changed two Scan Status Indicator Colors so that CTCSS Tone isn't mistaken as activated.
Oct 16,2009 - Fixed: Links to Homepage updated to correct URL's.
Oct 16,2009 - Fixed: DTCS Tone Squelch now only enabled for PCR-1500/2500's.
Oct 17,2009 - Fixed: Mode Buttons in Serach Bank Editor now Enabled for PCR's ability.
Oct 17,2009 - Added: Serach Bank Editor's Window Position now Saved.
Oct 17,2009 - -----: BandScope MenuItems moved to BandScope Window.
Oct 18,2009 - -----: Freq Button now Selected when Quick Channel Button or Search Bank Button is clicked.
Oct 18,2009 - -----: Chan Button now Disbled when a Quick Channel Button or Search Bank Button is clicked.
Version 1.14.259 Released 10/18/2009

Regards,
Jay

Hi
Can anybody help me?
My PC will not see my PCR1500 or communicate with it after my power supply plug worked loose
I cannot see it in device manager, previously COM3 in ports
PCR1500 powers up at front and psu is reading 13.3V
I have removed the optional UT106 DSP board but no joy
Could the loose power supply damage the com port circuit board, is there a factory reset I could try, or can anybody advise on test points J2022 and J2021 on circuit board
Thanks
Iain

I am running PCPro under Win7 64bit and everything is working perfectly. The software supplied with the 1500 is outdated and may not work in Vista or Win7.

I have however uploaded a new file, CP210x_VCP_WIN7.zip to the files section. This will be needed to run the USB port. Just unzip and run.

I strongly recommend PCPro for the 1500/2500. And it is up-to-date. Icom doesn't seem interested in updating its software for users.

ICOM Technical support replied to me that Win7 is not presently supported but "they are working on it". I'm using Win7 Professional (64bit). I finally moved my PCR1500 to an older PC.

It appears others have managed to get it working but I haven't had much success.

The drivers from 2007 available from ICOM here:
http://www.icom.co.jp/world/support/download/firm/index.html

work fine with Windows 7 RC

Use the Vista drivers located in the Drivers directory.

If you are still have issues I will help you out.

Here is some info just to check on

1. Have you tried PcrPro just to see if it work ok?

Here are my driver info.

****
CP210x USB to UART Bridge Controller (COM5)

Driver Provider: Silicon Lab
Driver Date 2/22/2007
driver ver. 4.40.1.0
Dig Sig. MS windows Hardware comp. pub.

Also check to see if you have USB CODEC for Sound installed.

174. WIN 7 USB DRIVERS FOR 1500/2500

Yahoo group: PCR1500
Date: 2009-11-18 17:55:06 UTC
From: dav90560
Topic: 174 Message: 174

As I tried to state in an earlier message you need Win7 USB drivers for the software to find the Com port.

I have uploaded the appropriate drivers to the files section.

CP210X_VCP_WIN7.zip Note separate drivers for 32/64 bit.

I had problems after upgrading to WIN7 & using PCPro.

After installing the new drivers everything worked perfectly.

Would not trust Icom to update their software.

Hello to the group and thanks to the moderator for welcome.

I'm new on this group as a very newbie PCR1500 owner.

I'm sure to find here very usefull answers and tips from the experimented users.

Tested on XP sp3: Icom soft works great and i will try it on Windows 7 home edition 32bits,in a few days.

PCRpro software wich works great on XP too,will be tested on 7 soon.

The last Icom software/firmware releases are downloadable
for Vista on the officials Icom Websites.

Windows 7,Icom upgrade in a near future ? don't know.

Maybe compatibility mode downgrading could help with Windows 7 ?

USB ports creates several Com ports, try all the ports manually.
It works for me on port n° 4.

Loosing the port from time to time on powering (bug ?)but i always force to port 4 and it's going back.

Best regards and 73s.

183. PCR1500 on a Win 7 Machine -- help and advice

Yahoo group: PCR1500
Date: 2009-12-12 21:10:56 UTC
From: k7zoboise
Topic: 183 Message: 183

I could use some help and advice. I have a PCR1500 that I am trying to install on a new 64 bit Win7 machine -- moving it from an old XP box. It has 2.1 firmware in it.

I installed the CP210x to USB to UART drivers and in the Device Manager I can see it is setup as COM3. the port settings are 9600, 8, N, 1, N. Driver version is 5.4.24.0 dated 7/7/2009.

I plugged the PCR1500 into the USB port and turned it on. I did get a system beep, but I didn't see the expected "installing device driver software message". I might have messed things up in an earlier attempt to install the drivers and software - before I read all the messages on the forum here. Does anyone have any advice here? I might have plugged the PCR1500 into the system before I had the new USB drivers in place.

I installed version 2.1 of the control software. When I start it up the "Port Setting" dialog box comes up. If I click "Search" it does not find anything. And I cannot manually enter anything in it to try to point it to Com3. It seems like some people have been able to do this but I can't. Anyone know what I might be able to do here?

Thanks in advance for any help you can offer.

Scott

184. Best Software for PCR1500

Yahoo group: PCR1500
Date: 2009-12-13 20:39:21 UTC
From: cggemt
Topic: 184 Message: 184

Hi All,

I just ordered my PCR-1500 and have been exploring different choices for software. I have seen references to TalkPCR, PCRPro, Bonito and of course, the Icom software. I will be using the SW on an HP laptop running Vista.

I will be using the radio to listen to maritime channels and cruiser nets on HF and VHF as well as copying NOAA WX Fax transmissions.

Any suggestions regarding the best software for this application?

Also, is there a place where I can download ".MCH" files for frequencies used for these applications?

Thanks,
Carl

Yeh, I tried that driver as well and found it didn't work for me either. Then I found an older version and it works on my Win7 Home ver on a laptop. It comes with 64bit version as well. Have a look in "Files" for 'PCR1500Drivers.zip'.I just uploaded it today.
Hope that helps you.

From: k7zoboise
Topic: 183 Message: 187

Made a bit of headway here. I plugged the PC end of the USB cable into a different USB port on the PC and got the full and expected "installing device driver software message" with a "device is now ready to use" messge or whatever it says exactly. So, try that.

However, I am still stuck getting the control software to point to COM3. Though the screen comes up I can't actually type anything in.

On another front though all our local police and fire are switching to encrypted audio -- thus effectively ending my scanning hobby. So, anyone interested in a used PCR1500?

Season's wishes folks,

This is why I haven't yet changed over to Windows7 or even Vista. Got their free of charge Win7 Beta on a separate partitition, saw the problems (also with SpectraVue, etc), and chose to stick with Windows XP.

Every time Microsoft needs cash from the market and sells us a new Operating system, does the entire planet have to redesign new drivers? This costs us all (including Icom, etc) money, time, who pays-or is willing to pay-for all this ?

Microsoft's lack of backward compatibility, is to blame, not Icom, etc!

On the here and now, however..., for the folks who haven't got WinXP on a different partition, please do try Microsoft's transition software. This will allow you to run Windows XP from withing Windows 7.
I had tried it with Windows Vista, and applications that wouldn't run on Vista, ran in this way.

189. I wish you a merry Xmas !

Yahoo group: PCR1500
Date: 2009-12-20 19:05:20 UTC
From: jean-louis
Topic: 189 Message: 189

Hi the group,

I want to wish you a very merry Xmas and a healthy,prosperous and happy NewYear for you and yours.

As many of us, i have tried the PCR1500 on Win7 (home 32 bits edition)with no success.

Tested the brand new usb Silabs driver with a good Silabs device install !! (Win7 finding it working right and the driver being good)

Launched then the Icom V2.10 software and got only the "com port error" message.

No way to change the port com number in the Icom software port window (no chance with the "automatic setting" too).

Testing older driver and (or) software versions gives the same com port error !

Tried also with the same bad result the PCR1500Driver.zip file attached by daveswx on dec 18, 2009,in the files section.

Thanks indeed to daveswx for the file of the driver witch worked for you.

I hope for all of us that Icom will make the necessary efforts in 2010 to resolve the too bad problem !

Who knows ?

Best regards and 73s.

Jean-Louis. F6BNL

Subject: [PCR1500] I wish you a merry Xmas !

Hi the group,

I want to wish you a very merry Xmas and a healthy,prosperous and happy NewYear for you and yours.

As many of us, i have tried the PCR1500 on Win7 (home 32 bits edition)with no success.

Tested the brand new usb Silabs driver with a good Silabs device install !! (Win7 finding it working right and the driver being good)

Launched then the Icom V2.10 software and got only the "com port error" message.

No way to change the port com number in the Icom software port window (no chance with the "automatic setting" too).

Testing older driver and (or) software versions gives the same com port error !

Tried also with the same bad result the PCR1500Driver.zip file attached by daveswx on dec 18, 2009,in the files section.

Thanks indeed to daveswx for the file of the driver witch worked for you.

I hope for all of us that Icom will make the necessary efforts in 2010 to resolve the too bad problem !

Who knows ?

Best regards and 73s.

Jean-Louis. F6BNL

Hi Jimmy,thank you for the answer

It's working now with Win7 Home Premium: Icom soft under XP sp3 "compatibility mode" as well as PCRpro "directly" with Win7.

All the best. 73s. Jean-Louis (F6BNL)

193. PCR-1500 on LINUX

Yahoo group: PCR1500
Date: 2010-01-10 09:50:46 UTC
From: guycole@gmail.com
Topic: 193 Message: 193

Hello.

I have a brand new PCR-1500 which I want to use on LINUX.

I can see the receiver start w/H100, but I don't get any response when I write back a H101.

I also have a PCR-1000 which is working very well for me. I was hoping the 1500 would be very close (and maybe it is) but right now I am stumped.

Appreciate any advice. Thanks for reading.

Hello members,

I would like to add a moderator (or more) to the crew. If you are interested in being a moderator, please respond to this message or email me.

Also, I would like to add a moderator or two at the PCR2500 Group if anyone is interested http://groups.yahoo.com/group/PCR2500

Please include the following in your email/message:

1. Name (First and Last)
2. Yahoo name/alias
3. E-mail address
4. Call Sign (if any)
5. Experience as a moderator elsewhere (if any)
6. How long you have been into "Radio"
7. How often you visit our group (number of times per day/week/month)

Thank you.

195. Windows 7 sound issue

Yahoo group: PCR1500
Date: 2010-01-16 19:13:57 UTC
From: TPartelow
Topic: 195 Message: 195

Hello friends,
I'm successfully running my PCR-1500 on Windows 7 Ultimate Edition without any issues...quite nice!
However, I'm having trouble configuring my audio properly. I'd prefer to have the audio output to my speakers rather than through the radio's internal speaker. Unfortunately, I can't find exactly where those options are available to me. Can anyone point me in the right direction? Thanks in advance!

Tim

196. Control head

Topic: 196 Message: 196

Hi all.

I suspect my question is already answered in the archive but I subscribed by email to the list and I'm having trouble registering all over again.

I have a PCR-1500. If I were to obtain a control head for the R1500 would I be able to use it with my receiver?

Thanks in advance.

Click on the speaker icon check the mute box for speaker and uncheck the box for PC. I am assuming that you are using the Icom software.

From: Jay
Topic: 198 Message: 198

Hey All,

Does anyone have a pdf of the Cloning Instruction Manual?
I'm mainly looking to see if it gives details on the Memory Map of the Clone Memory.

I will be adding Cloning Support to my programs for the 1500/2500's and have it about half way finished. The map I have decoded right now is about 50% complete :-)

Thanks,
Jay

Have you opened the Sound option in the Control Panel of Win7? You may need to make adjustments there. Also, remember to unmute the PC sound on the PCR's control panel and move the slider up a ways.

Thanks for your help everyone.
I know I need to adjust some settings in my Audio Panel on Windows 7...but I'll be darned if I knew which particular settings they are! It's quite unfortunate as doing this on Windows XP was so much easier ;)

I just received my new Pcr1500. It works great with the Icom software. I have waisted a whole day trying to get the Bonito radiocom 4.5 software to run. It was bundled with the radio when I purchased it. The software doesn't see the radio and will not allow me to install the software. Question? Do I need the DB9 dongal for the software to work. One part of the instructions says I do but another part says I don't. BTW, Universal Radio included the software but not the dongal???? Thanks Tim

Hi,

I must say that Bonito software works great but has some issue on the way in the installation.

For me it's a really good working software.

It seems that you have something occupy your USB ports.
And you CAN'T start ICOM software before you start The installation of Bonito installation.
It will lock your USB for a while and you need to restart your computer to release it again.

Things that maybe help you find a solution is:

1. Please make sure that your WEB-CAMERA is disconnected
(if you have one). some web-cameras are mixing the web-camera-microphone signal with the AF-input of your radio

2. Portmon v3.02 : use this little program to check on your COM port's activities
http://technet.microsoft.com/en-us/sysinternals/bb896644.aspx

This will tell you if you have some kind of problems or a just occupied USB port.

3. Have you any kind of Active synk or palm pilot software so be sure to disable the USB,s inside those programs.
Webcams, active synk, Palms, older audio USB drivers will occupy the usb until you disable or uninstall the drivers.

I really love this software so keep on going until you get an solution

Best regards
Daniel

It took me a week to get the Bonito software to run, but finally it works on an XP machine and is a lot of fun to use (I can't get it to work on a Vista machine yet, but others have done so, so I think it is not an operating system problem). Be sure to use the same USB port when you attempt to install it. Also, I used the PCR driver found on the Bonito disk and not the one from the ICOM disk. It is a slightly older version, but it made the difference.

As to whether you need the switchbox, it depends on the version of the software that you received. Bonito puts out two versions for the PCR1500. One requires it, and the other doesn't. If yours reads "Special Edition" or something like that, it is the version that needs the switchbox. If it just says 4.52, then you don't need it.

Hello I tried your drivers and actually do work but not always.
I've installed 7 on Windows Home Premium 64-bit miraculously after trying all my icom with your driver worked perfectly except that after a while off and on again or when the scanner goes out on a blue screen error (BSOD) and I have to restart computer.
I tested everything with your drivers and software version 2.10 and 2.11 you would have some suggestions also happened to you the same as the blue screen error?

Waiting for your reply and some suggestions
Thank you

Dave I have tried and actually post work but unfortunately for a short time because the computer always restart with blue screen error.
The problem is that for 64-bit versions of Vista and Windows 7 should make a WHQL certification for this reason only the most ICOM release the driver must pay about $ 400 for certification.
We must try to write us for assistance ICOM have let us do all the drivers!

Dave I have a question, but you run on Windows 7 Home Premium 64-bit or 32?

Not sure which Dave you are asking this question of, but I will reply anyway.
1. I am no expert to get into the correct setup for the PCR1500 however I have my PCR1500 running on my laptop, Win7 64 bit, without any problems. Had to hunt for the correct drivers for the serial adapter I am using and just a little problem setting up the correct port, but everything worked in the end.

The big problem that I am reading on here is the fact that they are trying to use the ICOM software. The ICOM software will not work on Vista or Win7, 32 or 64 bit. It also appears that ICOM has no intent of updating their software. Buyer beware.

What does work is PCRPro. Yes, you have to pay for it but it is updated regularly. If you wish to run your PCR1500 in Vista or Win7 then you have to get PCRPro.

Hope this helps.

I have been using ICOM's software (2.10) for months on both Windows 7 64-bit and Windows 7 32-bit plus several months before that on Vista 32-bit. For it to work correctly in Vista both the 2.10 firmware update had to be applied and the 2.10 software (the software on the CD that came with it did not appear to see the port).

The very latest version of the serial port drivers do not seem to be recognized by the software but the 4.40.1.0 version (dated 22/0-2/2007) seem to work fine and are WHQL signed. (The only two drivers required are the USB serial port drivers and the USB Audio drivers).

Only issue I had with Windows 7 and my motherboards sound drivers was that I had to adjust (turn down) the volume on the input audio as it sounded aweful, but after that everything has been fine.

Hello thank you for what you say,
but I wanted to understand how did you get it to work that brings you set? Best explains all the steps you made and maybe if you can put in upload your drivers and your software.

I tried with the drivers PCR1500Driver.zip files attached to this yahoogroup radio works but after a while shows a blue screen error (BSOD)

You how to use the ICOM radio with the original software, or with short PCRpro Explain in detail how did you make it all work.

Thank you

You're very lucky I'm trying for 4 days and I can not run it at this point I hope the icom driver releases for Windows 7 32/64 bit, in fact I invite you to contact the assistance icom at www.icomamerica.com and push for him to release the new drivers.
This is a council because they see that many of us with this problem.

This advice does not apply to those who are lucky drivers and run the same on Windows 7 64 bit.

Subject: [PCR1500] Re: PCR1500 on a Win 7 Machine -- help and advice

Not sure which Dave you are asking this question of, but I will reply anyway.
1. I am no expert to get into the correct setup for the PCR1500 however I have my PCR1500 running on my laptop, Win7 64 bit, without any problems. Had to hunt for the correct drivers for the serial adapter I am using and just a little problem setting up the correct port, but everything worked in the end.

The big problem that I am reading on here is the fact that they are trying to use the ICOM software. The ICOM software will not work on Vista or Win7, 32 or 64 bit. It also appears that ICOM has no intent of updating their software. Buyer beware.

What does work is PCRPro. Yes, you have to pay for it but it is updated regularly. If you wish to run your PCR1500 in Vista or Win7 then you have to get PCRPro.

Hope this helps.

Giuseppe;
Sorry but I don't think I can help you with your problem.
The BSOD error means there is a conflict with the drivers you are trying to run and your operating system.
About the only thing I can suggest is to get someone to make sure your operating system is properly installed and the drivers you are trying to install are compatible with your system.

As you can see by the replies that a majority of people are not having problems.

I know it is very strange but it occurs especially on 64 bit systems on my computer before installing this never happened (Sony Vaio L series), I heard from icom who are working with Microsoft for WHQL certification and who are at aware of the problem and want to solve it. I hope that issue or the drivers or at least a patch for Windows 7 32 and 64 bit.

Hope well

The certification of the driver isn't that hard to do. You can actually get your own certified with some microsoft tools. It just takes time to do.

You can also try running your 64 Bit system in test mode to see if it WILL work.

http://msdn.microsoft.com/en-us/library/dd419910.aspx

I wouldn't hold your breath on Icom investing any more money on this. I would only believe it if you got that answer directly from the Product Manager.

Mike VA3MW

The TESTSIGNING Boot Configuration Option

The TESTSIGNING boot configuration option determines whether Windows Vista and later versions of Windows will load any type of test-signed kernel-mode code. This option is not set by default, which means test-signed kernel-mode drivers will not load by default on 64-bit versions of Windows Vista and later versions of Windows.

*Note *For 64-bit versions of Windows Vista and later versions of Windows, the kernel-mode code signing policy requires that all kernel-mode code have a digital signature. However, in most cases, an unsigned driver can be installed and loaded on 32-bit versions of Windows Vista and later versions of Windows. For more information, see Kernel-Mode Code Signing Policy (Windows Vista and Later) <http://msdn.microsoft.com/en-us/library/aa906239.aspx>.

The TESTSIGNING boot configuration option is enabled or disabled through the BCDEdit command. To enable test-signing, use the following BCDEdit command:

Bcdedit.exe -set TESTSIGNING ON

To disable test-signing, use the following BCDEdit command:

Bcdedit.exe -set TESTSIGNING OFF

*Note *After you change the TESTSIGNING boot configuration option, restart the computer for the change to take effect.

Giuseppe;

I can understand your frustration dealing with the problem. I will make the following suggestions.

Re-install the ICOM program first. This is in case the ICOM drivers install over the WIN7 drivers.

Download the CP210x_VCP_Win7.zip file from the files area. Unzip and install the correct driver. If you have already done this then re-install the driver again in case it didn't install correctly the first time.

If this doesn't work then I suggest you consider purchasing the PcrPro program. Just do an internet search for the website. It is current and up to date, unlike the ICOM program. As has been stated before, don't expect ICOM to update their software.

I hope this works.

222. PCR1500 Driver Problem?

Yahoo group: PCR1500
Date: 2010-03-25 21:57:49 UTC
From: Kevin
Topic: 222 Message: 222

I got the 1500 a few months ago and got it working with the Icom s/ware on my XP box..
It seemed a little unreliable but worked most of the time.
Tried to use it on my latest 2 Vista boxes without success.
I read that the Icom s/ware did not work on Vista so I got PCRPro.
Can't get it to run on Vista so went back to the old XP and can't get it to work again.
Seems like a driver problem.
1500 takes 12mA when the power switch is on and goes up to 16mA when I connect USB cable.
I have been talking to Jay but have not resolved my problem yet.
Can anyone please suggest what to do.
Tnx Kevin Phx Az

Replying to my question.
With the help of PCRPro Jay I got my 1500 going with XP & Vista.
The solution was simple but does not make sense.
After moving house I cud not find the PSU that came with the 1500.
I hooked it up to a 12V 750mA walwart and cud not connect to 1500.
Jay said it needs at least 1 Amp supply.
Used a 4 Amp supply and all OK.
My 1500 only takes less than 100 mA at full volume.
Kevin Phx Az

My advice is format your computer to view works perfectly and you have to download the latest Verision icomamerica site at this address (if you check the firmware update is only for the first units left): http://www.icomamerica. com / en / downloads / Default.aspx # C5

On xp I can not help but I suggest that you format or if you are good you should delete all the drivers installed well and reinstall.

David thank you but I solved the problem I reset my computer and operating system and now everything works without bluescreen.
The problem was in my computer, perhaps due to too many multiple driver installations.
In summary I used the drivers that are in this group in the section files that are in PCR1500Driver.zip coupled with software version 2.10 and works perfectly on Windows 7 64-bit the icom japan then told me that if the software slows 2.10 while doing the scanning the frequencies where the confirmation beep disable or turn off the box: USB Audio enable

Thanks to all

One strange thing I noticed in my recent troubleshooting.
Previously it was only taking less than 0.1 Amp.
Now one Vista box is taking 0.3A & the other 0.6A and it is nothing to do with the volume level.
Happy Kevin Phx Az

Thanks for your comments Giuseppe

With PCRPro Jay's patient help I now have 2 Vista & 1 XP box working with the 1500.
It was a driver problem with my second Vista box.
Plugging the 1500 USB in was not being recognised so I plugged in my Uniden 996 as well.
That was recognised and the "black magic" began!
The box recognised the 1500, did its thing and loaded drivers.

>

Same here Tim. Just got my PCR from Universal on Monday and I see the exact same sh..stuff here.

The PCs I have tried it on are my laptop a 1.3GHz P3 fujitsu Lifebook XP SP3 machine and my Main Desktop a 3.6GHz P4 Dual Core 2Gb Alienware. XP SP3 also. Nada on both.

The radio works with PCRPro as well on both. So it doesn't seem to be that no one can figure out how to interface their software with the radio and its interface.

I think it is just that the radio and it's associated sdk is beyond the capabilities of the Bonito ppl.
Too bad because all the advertising for RC 4.5-->6.0 features really are what I was looking for.

I would not even consider buying v6 until I can see that the software will install and run as promised/advertised.

Thanks,
Curt

>
> -Phil
>

Well isn't this a fine mess. Phil the CD which was packed in the ICOM box from Universal sure does say "Icom PCR-Special Version" in red for version 4.52.

Either someone screwed up spectacularly or Bonitos ethics are the question here.

If it is JUST a mistake and we all know that that happens they should either replace the disk or allow for a registered user to at least download the CORRECT app from their site. If the other....well I don't know what could be done other than everyone just never bothers to do business with them again.

As far as the radio goes it is EXCELLENT! Thank you ICOM.

Curt

I had the same problem with my PCR-1500 (now have the R-2500). I spent quite a few phone calls and a lot of the time with the U.S. distributor for bonito before finally getting it going. It doesn't require the dongle. Most of the problems stem from the copy protection scheme. But, if you are paitient, you'll get it to work. The buil-in digital mode decoding is the best part of it.

Thanks Phil,

I kinda gave up on it for a while...After reading your post, I checked and have the special edition.

I guess I'll call universal radio and ask for the correct version...

Good find...thanks...I will leave feedback here when I get the new disk

234. A newbie type question here

Yahoo group: PCR1500
Date: 2010-04-04 22:41:19 UTC
From: curt.tooley
Topic: 234 Message: 234

My 1500 seems to run well but I notice when I switch to CW or SSB from AM on a normal DX BCB freq where in AM you will here the normal hash I switch to CW and the audio goes quiet. No sound from either the PC audio line or the radios internal or external speaker. In a regular radio you would hear the same hash and if there were a AM station near the freq you would hear the carrier beat with the BFO or carrier insertion. This is with the stock ICOM software. With PCRPro I hear the expected noise or beats like I was expecting. The ICOM software is silent. Is it the software or am I missing something very basic here.

Topic: 202 Message: 235

No matter how many times I tried it didn't install. Then I called the distributor and he stayed on the phone with me, we had try to 4 or 5 times before it installed correctly.

I used to be in the computer business and 2 way radio. So, I am considered a professional. In the 80's I used to write software to communicate with all the then current radios via serial, parallel and gpib bus communication.

It seemed like the program did a lot of checking to make sure it was a valid copy. My version of bonito didn't require the dongle to work as it would read the radio serial number to make sure you didn't use iton more than one radio or one computer.

God luck,

Bill

Subject: [PCR1500] Re: Bonito Radiocom 4.5 not seeing the 1500

So Bill just what did you have to do to get it going..?? Just keep trying to install it or did you have to do something out of the ordinary.. Like no, no you have hold your tongue out the right side of your mouth instead of the left while trying to install and get it to run :-)

Curt

> I had the same problem with my PCR-1500 (now have the R-2500). I spent quite a few phone calls and a lot of the time with the U.S. distributor for bonito before finally getting it going. It doesn't require the dongle. Most of the problems stem from the copy protection scheme. But, if you are paitient, you'll get it to work. The buil-in digital mode decoding is the best part of it.

Ok final episode....

Spent the last week emailing between myself Cord at Comp-Int and Dennis at Bonito.

First thing they did was get me a new install file. (Basicaly the same file structure as the CD) but with a new installer, or exe..not sure but it was new and lord of mercy is SAW MY PCR on com3 (USB Alias).

Finally managed to get the registration/activation sorted out and when I double click the desktop icon or the shortcut in the StartMenu/AllPrograms... It does NOTHING!! The wait cursor appears for about 10 seconds. then goes back to the normal one.

If you watch the processes in task manager you will see the RC45-2.exe process appear twice. One is using 0% CPU resources the other is useing 99% CPU resources. No interface appears. No error messages. It may un blank the squelch on the radio but then it shuts right off again and still no application interface.

So I would say it is a dead horse. Not going to beat on it anymore.

A Shame, the program looked good.....but doesn't do squat. and the email support just died also. Guess when you can't figure it out you just slink away...

Curt

Hi Curt,

Sorry to hear about your problems with the Radiocomm software. By now I'm sure you realise you are not alone. I'm in the UK and purchased Radiocomm V5 to drive my Lowe HF receivers. It didn't work for them either. In that case I could get the software runnning but not talking to the receiver. When I looked at the signals coming out of the Bonito 'dongle'/interface they didn't look right at all and no surprises, it didn't work. I waisted a lot of time on that software and even built my own chinese copy of the interface (a simple anti-piracy circuit is used for Radiocom V5.) with improvements to signal handling..... still din't work. I concluded that the software was 'talking' gibberish to the receiver as that was how the Lowe microproccesor saw it !
I tried controlling other receivers using the software on different computers, all to no avail. Support was unable to help and as I purchased the software second hand (but it is original!)no refund was available. Due to this saga, I did not buy the IC-R1500 variant as I didn't need the grief !

All in all. I must agree with many other owners of this expensive coffee coaster. In my case it promised much and delivered nothing but heart ache !

For those who have been lucky and maanaged to get the Bonito software to work.... I salute you, and I hope it is as good as the pictures make it look.

Final Episode for me

Called cord

He stayed on the phone with me till it worked...It seems Bonito sent me a bad CD key.

Once the key issue was resolved...worked great...worth the hassle to install. You do

NOT need the dongle to run the 4.5 special edition packed with the radio.

Again....Cord was great !! Now looking fwd to playing with the software

Thanks to all that replied to my request for help.

Replying to my own question, it may help someone else.
I run PCRPRo as Administrator and it then saves the recordings.
Downside was I had to re-enter all the freqs I had stored.
Maybe I can just load the previous files? Something to look at.

I recently upgraded my PC from Windows 98 to Windows 7 Pro 32-Bit.

I have been trying to get the virtual com port driver to work, but when I start the icom program, the list of available com ports is empty.

Any suggestions?

Thanks!
Tim

Dear Tim.
I got my pcr1500 last Saturday and could not get it work at all on Windows 7..I reverted back to Windows Vista and it is working perfectly.
It is well known from Icom that their products will not work on Windows 7 64 bit......but I was running 32 bit it would start the software up but within 2 minutes the system would crash.
Sorry it is not good news but hopefully you are able to revert to Vista.
If you dont have Vista I will gladly send you a copy free of charge mate.Please let me have your feedback.

Thanks for your reply Kevin. Some things I have tried:

1. Running the program in compatibility mode and with administrator rights
2. Running the program in XP Mode (Virtual Machine)
3. Running PCRPRO and TrunkPCR. Both programs see a Com Port and will start. PCRPRO usually results in a Blue Screen after a few minutes. TrunkPCR usually goes longer, up to around 20 minutes, before resulting in a Blue Screen.

I'm running my original version 2.01 software and firmware. I can't upgrade the firmware because I can't connect to the receiver. I will try installing on my wife's netbook (Windows XP) and doing the firmware upgrade to 2.10.

I am using the CP210x_VCP driver from the files section here.

Any other ideas?

Thanks! :)
Tim

That would be [Menu] Button -> Edit -> Bank / Channel List...
Then click the "Hits" column for the channel you want to edit and type in
"0" (Zero) and press Enter...

You know there is a PCR Pro Yahoo group, where program specific questions
would be best asked/answered :-)

OK, I upgraded the firmware to 2.10 using XP on my wife's netbook. Then, I reinstalled the CP210x_VCP driver and installed version 2.10 of the prgram on my Windows 7 PC.

Still no joy. The iCom software will not see any com ports. PCRPRO continues to Blue Screen after a few minutes.

I suspect a system conflict. I tried to manually add a Com Port device and it shows a conflict with the PCI bus on all available memory ranges. I'm not sure where to go from here. I don't see anything in the BIOS that would make a difference. Perhaps upgrading the BIOS?

From: cherisknight
Topic: 241 Message: 250

All,

I stumbled on this post in another forum and now have the icom software working in Windows 7 with the virtual USB com port driver:

http://groups.yahoo.com/group/PCR2500/message/1352

Note that USB audio is not working for me, but I run a cable from the receiver speaker out to my sound card and it works just fine. I also experienced several freezes after following the steps in the post. I have two changes and I'm not sure which one fixed the problem:

1. I turned off the Confirmation Beep in the audio settings
2. I changed the virtual port flow control from NONE to HARDWARE

In the cfg file the post has you create, use IC-PCR1500 and your serial number. Com 3 and Sound Card 1 are my settings.

Good luck!

Tim

From: David
Topic: 241 Message: 251

I have PCPro installed on a laptop running Win7 64 bit through an external USB hub and I just checked it and PCPro runs just fine.

I am also running 3 other devices through the hub, a printer and 2 radio scanners and no conflicts.

I noticed during the past 2 weeks that Win upgrade provided a new driver, V5.4.29.0 dated the 03/02/2010.

Have you tried uninstalling or disabling your device via device manager and then unplugging the radio, restart Windows and plugging the radio back in? Not sure if this will do anything but it is worth a try.

Also are you running the latest version of PCPro, V1.4.259?

David/All,

I stumbled on this post in another forum and now have the icom software working in Windows 7 with the virtual USB com port driver:

http://groups.yahoo.com/group/PCR2500/message/1352

Note that USB audio is not working for me, but I run a cable from the receiver speaker out to my sound card and it works just fine. I also experienced several freezes after following the steps in the post. I have two changes and I'm not sure which one fixed the problem:

1. I turned off the Confirmation Beep in the audio settings
2. I changed the virtual port flow control from NONE to HARDWARE

In the cfg file the post has you create, use IC-PCR1500 and your serial number. Com 3 and Sound Card 1 are my settings.

Good luck!

Tim

Well Men,

Unfortunately I lost my job and I must sell this PCR2500, to help make ends meet. It is in mint condition and I still have the box it came along with the other boxes for the cards I have installed. The PCR 2500 comes with the UT-108 (DTMF decoder), UT-122 (APCO25 Digital vocie decoder)and the UT-106 (Notch Filter.) All of these are installed in the PCR2500. There are NO Mods to it it is still in it's original state and RUNS fine. I paid altogether over 1,200.00 dollars for it.
I am asking 850.00 dollars.

Brian

From: ondacorta01
Topic: 256 Message: 256

Hello group,

just wanted to inform that I installed my PCR1500 on my new netbook running Windows 7 Home Premium without problems using the Vista Drivers contained in PCR1500Driver.zip that I found in the "files" section of this group !

I am using the original Icom software (2.10) and it works flawlessly... I even get audio from the PC speakers, so I am quite happy (so far).

BTW, the machine is a Asus EeePC 1302n.

73,

Michele

257. Shortcuts, where ?

PCR Pro version 1.14.266 Now Available for Downloading from homepage:
http://members.cox.net/fifty.50/PcrPro/PcrProDwnld.html

This update has a Two Additions and One Fix...

May 20,2010 - Fixed: Setting Date Time Pickers Correct Date in Timed Recorder.
May 20,2010 - Added: Clicking the Channel Hits Indicator, now brings up the Channel Hit Editor.
May 20,2010 - Added: Separate Frequency display in Timed Recorder.

Version 1.14.266 Released 05/20/2010

Note: The Date Time Picker in the Timed Recorder Settings will show as Month/Day/Year.
Ex: May 21, 2010 will show as 05/21/10 for ALL Regionial Settings...

Regards,
Jay

MUST sell all equipment I would like to sell as a package. This package includes,
1.) ICOM PCR 2500 Communication Receiver installed with (UT-122) P-25 card,(UT-106) DSP Receive Unit and (UT-108) DTMF card. I have the software as well as the manual and the original boxes the unit came shipped in. In "mint condition"
2.) Ramsey Speech Scrambler/Descrambler (Factory Assembled.) I have the original box it shipped in, the power adaptor as well as the manual. In "mint condition"
3.) Optoelectronics "Digital Scout." I have the original box it shipped in. As well as the OptoSuite Pro software, Power cord and the interface cable to the computer. In "mint condition"
4.) Jim Professional Series (M-75) Pre-Amplifier with Variable gain. I have the manual and power cord. In "mint condition"
5.) Motorola "XTN series" radio. I have the base charger, power cord, and holster. In "mint condition"
6.) RHS1000 (75-1750 MHz) antenna kit, this is a Diamond antenna kit, very hard to come by. I have the case as well as the manual. In "mint condition"
7.) Omni-directional "desktop" discone antenna. Comes with the tool to take out leads if needed. In mint condition.
8.) Assorted BNC connectors, Radio Shack mono speaker, 100ft RG 8X cable (Never use) a few different antennas and a MFJ -1720c switcher.
I have pictures if you want to see anything. I am asking $1,500.00 for everything. I will pay shipping.
Please feel free to contact me if interested.

>
> My 1500 seems to run well but I notice when I switch to CW or SSB from AM on a normal DX BCB freq where in AM you will here the normal hash I switch to CW and the audio goes quiet. No sound from either the PC audio line or the radios internal or external speaker. In a regular radio you would hear the same hash and if there were a AM station near the freq you would hear the carrier beat with the BFO or carrier insertion. This is with the stock ICOM software. With PCRPro I hear the expected noise or beats like I was expecting. The ICOM software is silent. Is it the software or am I missing something very basic here.

Barrie,

I'm a newbie here, having just recently bought my PCR-1500, but I
do have it working under W7 64-bit "pretty well". Make sure you are
running the program as Administrator. To do this, right-click on the
PCR-1500/2500 desktop icon, then select "open file location". You should see PCR1500.exe on the file list. Right click on it and select
"Run As Administrator". Now, you should see a shield symbol on the desktop icon. When you click on the icon, the PCR program will bypass many Windows security checks. Worked for me. Good luck.

Mike

Dear Mike....many thanks for the speedy reply.I am glad to say your suggestion worked fine icr1500 up and running a few hours now.Before it would lock up after aprox 10 minutes..
Must say im loving the scanner my first real scanner using a Tandy pro 2004 up to now pretty basic.
Also using the Icom ah8000 discone and am very pleased with it.
For listening also have Tandy pro 26 hand held.
For txtng am using Icom IC706 MK11G and a moonraker tri band vertical for 6/2 and 70cm a snowdonia radio company SRC80 vertical and for hf use a Trio ts940sat.
Would love to know a bit more about you and your set up Mike I am 60 and have been g4yjs since 1984...prior to that I was g6hzl......and for many years before that an swl..
I now prefer listening/watching and data modes using a west mountain radio Rigblaster duo.
cheers and again many thanks Mike 73 Barrie g4yjs.

TrunkPCR version 0.90.273 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcrDwnld.html

NOTE: Moto Type-I Support *should* be finished in the next major update.

This update has Four Changes, Four Additions and Five Fixes...

Jul 20,2010 - Fixed: Processing D-Star NMEA Messages that have "$$CRC"
with-in.
Aug 03,2010 - Fixed: Limits of Users who have Donated More Than $500.
Sep 28,2010 - -----: Changed ReBanded Freq Plan (Switch to Splinter, then
ReBanded).
Sep 30,2010 - Fixed: RR.com Web Import's Mode Setting.
Sep 30,2010 - Fixed: RR.com Web Import's Frequency Search Selection of
Channels.
Sep 30,2010 - Added: Description Selection of RR.com Web Import's Verify
Channels.
Sep 30,2010 - -----: Channel List Editor has better Editing Capabilities.
Pressing Enter in a Cell now Edits the Cell
Contents.
Changed Lists to ComboBoxes for better selection.
You now need to Double-Click a Cell's Contents to
Edit a Cell.
Fixed False changing of a Cell after clicking a
different Cell.
Sep 30,2010 - Added: Channel List Editor Right-Click Menu for Mass
Editing in a Column.
Sep 30,2010 - Added: Save & Print Search Results in RR.com Web Import.
Sep 30,2010 - Added: Saving RR.com Web Import's Window Position.

Version 0.90.273 Released 09/30/2010

Regards,
Jay

274. Remote access for Icom IC-PCR

Yahoo group: PCR1500
Date: 2010-11-21 18:26:32 UTC
From: jcarlos.prieto
Topic: 274 Message: 274

Hi group,

I have developed a web application which permits me to use my (unlocked) Icom IC-PCR1500 receiver remotely from any place from Internet. I have worked hard on the interface and on being able to use it from anywhere even through firewalls and so on. It uses pure http.

You may have a look to my application at:
http://hipotenusa.net/PCR/index.jsp

You just need the Java runtime (which is usually installed on the computer). The application can be used during 30 minutes and after that period of time it is disconnected. Then you must wait for 5 minutes to give time to others to connect.

The receiver is connected to a GMDSS-1 antenna from RF Systems which is a HF antenna. The site is located in Madrid, Spain.

I will appreciate some feedback from you. If someone is more interested, you may have a look to some documentation at:
http://hipotenusa.net/PCR_AnyWhere/index_en.html

Also, if you wish to download the application and set up your own server your may have a look at the set up instructions at:
http://hipotenusa.net/PCR_AnyWhere/setup_en.html

Regards,
..JC

Given the good welcome of that application, I am going to create a distribution list for the people who wish to be updated of new versions. So, if you are interested, just drop me an email at pcr@... and I will include you in my list. That will be a private list: no spam, no advertisements...

Cheers,
..JC

277. Re: Remote access for Icom IC-PCR

Yahoo group: PCR1500
Date: 2010-11-23 23:08:01 UTC
From: jcarlos.prieto
Topic: 274 Message: 277

Hi there,

I am releasing today a new version of PCR AnyWhere (remote control of Icm IC-PCR scanners through web interface). It is now at version 1.2 and it contains some small improvements and fixes:

- Accelerated Aoki data loading by transferring in zip format.
- Enlarged the list of audio devices to be able guessing which is the correct one.
- Added selector of frequency in Hz or kHz.
- Normalized the frequency display and input so that it doesn't depend on the regional settings.
- The AF level and mute controls now control the audio at the client side.

The new version is available for testing at http://hipotenusa.net/PCR/index.jsp

There is also a new version of the download and set up instructions, including a new section for the upgrade to this new version at http://hipotenusa.net/PCR_AnyWhere/setup_en.html

I hope that you will enjoy it.

Cheers,

..JC

From: n0nku
Topic: 278 Message: 278

Hi Everyone,

I have 1 PCR1500 for sale. Very Clean and working like a charm. I have not used it very much as it has been stored in a padded case. Included with the PCR1500 is 1 AC Power Cable, 1 DC power Cable, USB Cable, ICOM PCR1500 Software.

$400.00 obo.

Serious Inquiries Only Please. If it does not sell here I will post on Ebay.

Thanks
Rick

Hi everyone. The previous listing of my Icom PCR1500 here is going on Ebay. Had a few people ash questions but no commitments on buying it.

283. PCR AnyWhere version 1.6

Yahoo group: PCR1500
Date: 2011-01-03 21:50:41 UTC
From: jcarlos.prieto
Topic: 283 Message: 283

Gents,

I wish to inform you of a new version of PCR AnyWhere. We are now at version 1.6. Apart from other improvements, this new version supports the receiver Icom IC-PCR100. With this new one, all the Icom IC-PCR receivers are supported.

The other big change is the way to introduce frequencies. Now, you don't need to select the frequency display. Just type the frequency at any moment. Type a dot to separate MHz.

The other big improvement is the management of frequency steps. Just customize them as you wish!

Check the help page and the release notes to get all the new functionalities.

Thanks again to TA3AS for his support and for providing me access to a PCR100.

As usual, you have this new version available for testing at:
http://hipotenusa.net/PCR_AnyWhere/index_en.html

I will appreciate your feedback.

Regards,
..JC

284. PCR Pro version 1.14.276 Now Available

Yahoo group: PCR1500

From: Jay
Topic: 286 Message: 286

TrunkPCR version 0.90.278 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcrDwnld.html

NOTE: Moto Type-I Support *should* be finished in the next major update.

This update has Two Additions, One Change and Two Fixes...

Nov 28,2010 - Added: Mute Digital in Trunk Settings. Allows you to hear
Externally Decoded Audio Only.
Dec 05,2010 - Fixed: CSV File Import's Default Channel values.
Dec 07,2010 - -----: Adjusted the Height of Many Dialogs.
Dec 20,2010 - Added: 4800 hz Tone Detection for Edacs Dotting Tone.
Jan 06,2011 - Fixed: Changing/Editing Wave Format in Timed Recorder.

In the Trunk Settings, you can "UnCheck" the "Switch to Control When
Dotting
sequence Heard" checkbox and now try the "Dotting Tone Detector" slider.

You can select a value from 36 to 60, 36 for a real noisy voice channel or
up to 60 for
a really clean signal. I'm using 42 at the moment.

Version 0.90.278 Released 01/13/2011

Regards,
Jay

287. Radiocom 4.52 on a Vista64?

Yahoo group: PCR1500
Date: 2011-01-29 20:25:17 UTC
From: utahwriter72
Topic: 287 Message: 287

I just changed computers and went from an Windows XP machine, where the Bonito Radiocom 4.52 program was running nicely, to a Vista 64 bit machine. The ICOM software works just fine, but I can't get the Radiocom 4.52 to work, sez "Inital Error" when I try to run it. It recognizes the radio on the set up, but it just won't run, even in compatability mode.

Before wasting a lot of time messing with it, can anyone tell me if the program will run at all on a Windows Vista 64 installation?

Thanks.

-Phil K7SHL

Did you try to start the program "as administrator"?
Under Vista many software don't work well if you simply clik on the icon.
You must point the mouse on the icon, click the right button and choose run as administrator clicking with the usual left mouse button.
Have a nice Sunday

No I'm running 32 bit Vista. Sorry I cannot help you. Maybe you could upgrade from Vista to Windows 7. I read on many groups that it's better than Vista. I'm not so happy with Vista too. Maybe I'll upgrade or buy a new laptop.
Have nice time Phil

Wow! You actually got RC 4.52 to run on an XP machine? I have never gotten it to run on XP.

If you have the secret I would love to hear it. I talked to Bonito and Cort (email) here in the US and no go.

Thing is I think I stumped them also. Shame because it looks to be a
very cool application for my PCR-1500. The install can't seem to find the radio so it says "No radio..No install"

At least PCR Pro works fine.

Curt

Hi Kevin,

Simple enough, after downloading the update, just extract the zip file to the folder where PCR Pro is installed... "C: > Program Files (X86) > PCRPro"

That's all that's needed :)

Regards,
Jay

300. Windows 7 64 bit and the newer Icom Software

Yahoo group: PCR1500
Date: 2011-04-15 02:06:22 UTC
From: Wolfie
Topic: 300 Message: 300

I see quite a bit of hunting for a solution for the Icom software,
and Windows 7 64 bit machines...
I have it running just fine on 2 different 64 bit Win 7 machines,
and also a 32 bit Win 7 machine.
Here are your choices...
the actual Icom Web in Japan, which is in Jap language...
So you can put thiis url into GOOGLE TRANSLATE...

http://www.icom.jp/products/amateur/support/important_news/ic-pcr1500_cs9100/index.html

OR, you can join the PCR2500 yahoo group...

http://groups.yahoo.com/group/PCR2500/

and go the the software section for the file...

CD-287901-009.zip

It is the 2.11 version of the software.

If you really can not find it, let me know, and I will put it up on my own server for you to download.

303. Windows 7 32-bit update

Yahoo group: PCR1500
Date: 2011-04-21 03:03:21 UTC
From: ciprian_sufitchi
Topic: 303 Message: 303

I have a PCR-1500 and I am using Windows 7, 32-bit version. No problem with drivers or control software. However tonight Microsoft pushed some updates. After I restarted my computer, the control software stopped working. In the drop down list of ports there is no selection available. I verified, the port (5) Silicon Labs CP210X is still there in device manager. I uninstalled everything, installed back. No difference. When I connect/disconnect the radio Windows reacts promptly enabling or disabling the port. However no control software is able to detect my PCR-1500 as being available.
I wonder if this is about the updates from Microsoft. If yes, I assume there are other users with the same problem. If not, does anyone have a suggestion, what else to do?

Thanks,
Chip N2YO

So far, I've tried to install it on Win7 32 and 64 on two different PC's to no avail. Interestingly, I have it running fine on another PC, in fact, with 2 PCR1500 hooked up and running.

What I've found with this new driver is that if you run the installer, you cannot uninstall it and reinstall without doing a system restore. It leaves something in the registry that tells the installer that it is already installed. Bad code. Watch out.

I have not verified yet whether or not it is the driver that is flaky or the new application code, but the uninstall problem is enough to make me wary.

311. Loss of sound from USB connection

Yahoo group: PCR1500
Date: 2011-08-01 13:34:11 UTC
From: ROWAN
Topic: 311 Message: 311

Hi

I have a PCR1500 with the control head addition. When I first installed it it worked fine with both the contol head and via the PC without the control head powered on. It did however somehow mess with the sound settings for other programmes e.g. uTube videos.
It was while trying to get uTube sound that I changed some settings in Windows XP control panel sound control. I did get uTube to work by switching something in these controls - however since I have been unable to get sound through the USB port. I have uninstalled the software and reloaded it to no avail. The problem is that when I uninstall it does not seem to remove the drivers completely and so when I reinstall and insert USB cable instead of asking for relevant 'new' drivers it just recognises the devices (and attributes I think the wrong driver from somewhere else) and I am still unable to get sound through USB. The drivers seem to be different ones to what I had on original installation. Does anyone have any ideas - or does anyone know precisely what drivers I could/should delete to get back to where I was before I installed the software. Are there any register entries that I should be deleting?
Thanks in advance.
RR

312. Operating PCR1000 or 1500 without pc?

Yahoo group: PCR1500

Hello Thomas.

There may be but, as far as I know the only and easy way is to use the Icom remote
controller that is still available on eBay or if you can find one used.
It offers much more flexibilty and use for most applications without a PC needed.

Maybe someone else in the group will have a less expensive solution.

73, Denny

Hello Thomas.

There may be but, as far as I know the only and easy way is to use the Icom remote controller that is still available on eBay or if you can find one used.

It offers much more flexibilty and use for most applications without a PC needed.

Maybe someone else in the group will have a less expensive solution.

Hi Michael,

I have not used a Palm Pilot before. Is this a regular stock Palm Pilot
or is this some sort of specially modified Palm Pilot? Can the ICOM PCR
1000 software be loaded into a Palm Pilot?

Thanks again for your info.

Thank you Denny,

I was not aware of such a device for an ICOM PCR1000. I will look into
it as a possibility. I am running an old HP laptop which works okay but
am looking to go smaller.

Palm Pilots have become amazingly inexpensive as "flea market finds".
My Palm VIIx and M100 together cost less than the equivalent of 5 Dollars!

Take a close look at this well illustrated site -
http://www.geocities.ws/jjintokyo/

Iain, MM0BFF excellently tweaked the original software by "JJinTokyo" and IP1kC v1.2.2 can be found in the PCR1000 Group Files section if not elsewhere. Another program is "PCRPilot".

Regards,

Fred.

I'm sorry I can't speak knowledgably about this gizmo-I purchased it on impulse and have only hooked it up once io see if it worked(it was only $25). I just checked, and they're no longer available on ebay. I just put the batteries back in it and have apparently lost the programs that were loaded. The seller supplied them on cd, so I guess I have to load them onto the pc and then to the Palm. It's not the stock Icom software, but two simple programs for operating the pcr 1000. I'll look into it later and get back to you.

Thomas,

The program for the Palm Pilot is called IP1kc, and may be hard to find on the internet as the sites which used to carry the download seem to have been discontinued. An in depth search may turn it up. In order to connect a Palm to the pcr 1000 you need a serial cable with null modem adapter. The program is pretty simple and would probably suit your needs.

Thanks for confirming Thomas (maybe it was the accent!) :-)

You'll have noted that a simple adapter is needed between the Palm Pilot and PCR1000. I made mine very small and rugged from two DB9 connectors wired 5-5 with 2-3 and 7-8 crossed then epoxied back-to-back.

The Palm Pilot method certainly makes PCR1000s worth keeping!

:-)

Fred.

Hello all.

Just rejoined this group after an absence. I have for sale one of my PCR1500's.

It is in mint condition and comes with original box, usb cablen manual
and software aswell as a power supply.

I am located Crawley, West Sussex, England. I would prefer collection
in person with payment by cash but I will arrange delivery if needed.
The price is £150. Payment either cash on collection or bank transfer.

Please email me or call me on 07759 895688/01293 407352 if you are interested.

331. PCR AnyWhere ver 2.0

Yahoo group: PCR1500
Date: 2011-09-24 17:41:10 UTC
From: ta3as
Topic: 331 Message: 331

Hi,

A new version of PCR AnyWhere has just been delivered: it is PCR AnyWhere 2.0.

PCR AnyWhere is a software to remotely manage receivers of the type Icom IC-PCR and IC-R, and starting from this
new version, it also allows local operation.

The software and the user manual are available for download at our new web site http://pcranywhere.com.

This new version contains a lot of improvements and new functionalities. The most important changes with respect to
version 1.7 are the following:

- User friendly interface with the main functions of the Icom scanners
- user friendly setup and configuration utility
- Local or remote operation of the receivers
- Support to manage multiple receivers connected to the same PC
- Support to listen the activity on a receiver that is used by other
- Support of user profiles and scheduled access restrictions

We hope that you like it. Don't forget to leave your comments in the forum that we have created in the web site.

Your opinion is very important for us.

Regards,

Topic: 344 Message: 344

Hi,

A new release of our software to manage Icom IC-PCR scanners has been delivered. This new version is PCR AnyWhere 2.1.

The software, release notes and the user manual are available for download at our web site http://pcranywhere.com.

We have fixed a lot of bugs that were found by the first users and we also added new functionalities to enhance the access control from remote locations and to improve the audio quality.

Don't forget to leave your comments in the forum available at the web site. Your opinion is very important for us.

Regards,
..JC

Juan

Downloaded this earlier this evening and I am thoroughly impressed by the amount of effort that you have put into this programme and accompanying documentation.

Installed OK on my desktop XP PC in the shack which is attached to a PCR1500 and a PCR1000. Worked OK on the local machine and over the home network from my WiFi attached laptop.

One 'gripe' was that whilst using it on my local XP PC I was getting the received audio coming from PCR1500 speaker AND the XP PC via the USB audio. It may have been finger trouble but I could not get the audio to come from the XP PC only.

Once again, a professional, well thought through, excellent piece of work Juan - and it's free. Much better than the stock Icom offering! I'm sure it will be appreciated by all in the PCR100/1000/1500/2500 community. Thanks.

Al

Thanks Al for your feedback.

You can solve the local audio issue from the configuration tool. In the step 2, when the devices have been detected, you have the option to check 'L.mute' (Local Mute) on the receivers PCR1500 or PCR2500. Doing that, the local speaker will be muted when they are in use.

Regards,

..JC

You might also find this link useful, it looks a bit involved, but it worked for me.
Just be sure to follow the instructions carefully.

352. TrunkPCR version 0.90.282 Now Available

Yahoo group: PCR1500
Date: 2012-01-21 23:30:31 UTC
From: Jay
Topic: 352 Message: 352

TrunkPCR version 0.90.282 Now Available for Downloading from the NEW
Homepage:
"http://www.fiftyonefiftysystems.com/TrunkPcr/TrunkPcrDwnld.html"

NOTE: Moto Type-I Support *should* be finished in the next major update.

This update has One Fix and Two Additions...

Jan 12,2012 - Added: Country Agencies in RadioReference Import.
Jan 18,2012 - Fixed: Editing Frequency in Main Display using keyboard.
Jan 20,2012 - Added: Freq Plan Calculator.

Version 0.90.282 Released 01/21/2012

The Frequency Plan Calculator is a tool to help you determine UnKnown
Frequency Plans.

Using the Frequency Plan Calculator.

1) Identify the Base Frequency:
a. Select the LCN that is associated with the Active Control Channel.
b. Enter the Correct Frequency of the Active Control Channel.
c. Adjust Offset and Step Rate if needed.
d. Click the [Calculate Base] Button.

2) Determine Voice Channel Frequencies:
a. Select the LCN that is associated with a Voice Channel.
b. If the Base, Offset and Step is correct, its correct Frequency will be
shown.
c. If Not, then be sure the Step Rate is correct and adjust the Offset.
d. Repeat steps 2a to 2c for the rest of the entries in the Frequency
Found List.

3) Extended Freq Plans:
These can be identified with different Base Frequencies and Offsets.

Normally, the Base Frequency will end in 0000 (ex: 406.0000).

When you have determined the correct Offset and Step Rate, you can click on
the
other entries in the Frequency Found List and it's corresponding Frequency
will
be calculated and shown in the Channel's Frequency textbox. If the
calculated
Frequency matches the correct Voice Channel Frequency, click the [Save
Entry]
Button.

If you discover that different clustered LCN's have a different Base
Frequency
and Offset, then this system would use the Extended Freq Plan.

Regards,
Jay

354. PCR AnyWhere 2.1.1

Yahoo group: PCR1500
Date: 2012-01-30 17:51:22 UTC
From: Juan Carlos
Topic: 354 Message: 354

Hi,

PCR AnyWhere is releasing today the version 2.1.1 which is a maintenance release to fix the communications problems with some receivers of the type PCR1000 and PCR100. Apart from that, some other changes have been made like the option to manually set up the hardware or a drastic improvement on the time response of controls when the application is operated from a remote location.

The new version is available from the section 'Downloads' of our web page http://www.pcranywhere.com <http://www.pcranywhere.com/>

Your feedback is greatly appreciated.

Regards,

..JC

I clicked on the link to RadioReference and up popped the message so it is still in the TWiki.

Second the correct usb drivers for Win7 64 bit are right here. Look under Files and the CP210X_VCP_Win7.zip will supply you with the correct files.

I do not have my PCR1500 running right now but these are the drivers I used successfully when it was running under Win7 64bit.

Geert - ON1DQD

372. Using Remote Head problem.

Yahoo group: PCR1500
Date: 2012-03-12 07:55:46 UTC
From: clark.martin94
Topic: 372 Message: 372

Posted in another Forum but no replys.

I cannot find any setting to stop scanning when a busy frequency is found.
Using the 1500 on a PC the scanning can be made to stop until manually restarted. The Head unit does not seem to have that option. It just pauses for as long as the number of seconds delay that is set and then annoyingly resume scanning. This is not what I want.

Any ideas please?

Topic: 372 Message: 373

Try pressing the MR/SKIP button to stop the scan during scaning and likewise after the scan stops on a signalto hold it there.

It does work, but you have to use *pcrcloak*, which unfortunately is not available here http://www.mstargames.co.uk/ as of late. It worked pretty fair. You might ask them to post it again.

Also, an older version of Shortwavelog used to have a HRD server emulator function with which you could link HRD to Shortwavelog and control that way.

Pcrcloak works, and thanks to Geoff for posting the utility. You will need
the N8VB virtual com port adapter, or similar. I've used that and com0com
as well.

I would say that this is not normal. There is nothing in the 1500 to connect with the Internet so the problem must lie with the USB port/s.

If you have botyh front and back USB ports try connecting at the back. The other thing which some people have noticed is if you have any USB3 device connected to the PC. If you have try it without as for some reason USB3 radiates some sort of signal (I am told) that can interfere with Internet speed if you are using a wireless Router.

Selling my IC-R1500. Have had it for a year, have hardly used it, includes control head, power cable, couple head phone cords, stock antenna. I lost the software but you can download it. Looking for $350 (plus shipping) or best offer. Shipping to the US only.

388. New Install

Yahoo group: PCR1500
Date: 2012-10-12 06:17:45 UTC
From: vk2fjcm
Topic: 388 Message: 388

Hello all,

I bought an IC-r1500 recentley and am having issues in settin it up.

I have misplaced the installation disc/s that came with it and have been loaded the Control software from Icoms's website and installed it on my Win XP computer. According to windows I have successfully installed the software (version 2.20) and the respective drivers.

The issue I am having is that I am unable to get the comms port set up to begin communicating with my computer. In fact the radio connection box that appears is greyed out as disabled. I can hear the usb device connect/disconnect sound from my computer when I put in and remove the usb connection but can not see it appear in device manager.

I have read through the older posts in the group have not found any solution there. I'm hoping someone could give me a lead on what I am doing wrong.

Topic: 388 Message: 390

Thanks Jan. A good link!

I found the original installation disc and it is Version 2.10 after uninstalling the previous version. I think Version 2.2 is mainly for Win 7 and 64bit OS. I did not ask for any drivers to be installed and there were no apparent errors with the installation. With the unit powered off the port setting screen is now enabled however it still does neither shows any ports in the drop down box to select nor responds to the search function.

The head unit powers up ok receive just fine. I must be doing something wrong. I can not find anything in the manual to suggest what might be wrong. I have tried a seperate USB cable to elminate that possibility but the result is the same.

Any further ideas?
Cheers, Angelo

Jan,

Success!!

As the saying goes, did you read the manual thoroughly? Not enough in my case. The simple reason as you suggest was that the drivers needed to be installed prior to software installation as the receiver does not promote new usb device recognition. I was installing the software first and the drivers later resulting in my problem.

Thanks once again for your help.

Cheers,
Angelo

402. Help to re_install IC-PCR1500

Yahoo group: PCR1500
Date: 2013-03-15 11:22:27 UTC
From: graham
Topic: 402 Message: 402

Can anyone guide me through re-installing IC-PCR software, especially getting the PC to "talk" to the COM PORT (setting up the COM port as well).

It has been running quite happily for 4 years, before the motherboard died, taking the C Drive with it.
The PC is running again "Windows XP SP3), but does not see the com port, although it does display the com port options but both radia buttons are blanked out so cant select one!

thanks,

Graham

403. PCR Server Version 0.99.070 Now Available

Yahoo group: PCR1500
Date: 2013-03-23 03:45:56 UTC
From: Jay
Topic: 403 Message: 403

PCR Server Version 0.99.070 Now Available for Downloading from the HomePage:
http://www.fiftyonefiftysystems.com/PcrRemote/PcrRemoteDwnld.html

This update has One Fix...

Mar 22,2013 - Fixed: Had a glitch when a valid key file wasn't found
That Prevented Powering Up the PCR.

Server Version 0.99.070 Released 03/22/2013

Regards,
Jay

404. PCR AnyWhere 2.2

Yahoo group: PCR1500
Date: 2013-05-01 14:57:45 UTC
From: Juan Carlos
Topic: 404 Message: 404

Hi,

PCR AnyWhere 2.2 is now available for downloading from our web page
http://www.pcranywhere.com

This version runs under Windows, Linux, Mac OS X and some ARM based
boxes (like Raspberry PI and CuBox).

It also offers a better experience when accessing remotely your receiver
and a higher stability and reliability in general, apart from some
other new functionalities and bug fixes. Check the release notes for
more details.

Your feedback is highly appreciated. We hope you will enjoy it.

Regards,
..JC

Topic: 406 Message: 406

Hi friends I have a question is it possible and how to control the PCR-1500 from a remote computer?
I explain at best my needs I have the PRC-1500 controlled from a laptop in my home that has a wi-fi net, with Teamviever 8 I'm able to control the PCR-1500 from a remote computer in my holiday home but I can't hear audio. I should like to have full control of PCR-1500 from a remote location obviously with audio. 73 de Federico IZ1FID

409. usb connection

Yahoo group: PCR1500
Date: 2014-02-21 02:12:32 UTC
From: <lmhodnett@...>
Topic: 409 Message: 409

I had a glitch on my computer several months ago and lost my Icom software. Since then I have tried several times to reinstall. I keep getting an error form silbs that the software I am update is not as new as I have installed. Problem is silaba does not appear on my com/lpt ports in device manager. I cannot find any instance of it on my computer, but the computer thinks there is. Anyone have any ideas or how I can run the software without using silabs. I have other scanning program I have tried and none will work because they cannot link to a usb port. Any help would be appreciated.

Thanks for your help. That is where I got the files to update. When I try to install I get the message that this is not newer than the one I have. And there lies the problem. I cannot find a silabs reference in LPT/Com in the device manager. It must be hidden in some files somewhere or the registry. I do not know enough about where files are to try to track down. There has to be an answer somewhere.

Are you using CP210 USB Bridge Controller?
That is what shows in my Device Manager - Ports (Com&LPT)
Been working for years now with Jay's PCRPro s/ware.
Use it instead of "the newer one"

http://www.silabs.com/products/mcu/Pages/8-bit-microcontroller-software.aspx

Preview by Yahoo

Do not connect the radio at first. If you have previously connected the radio, go to device manager and uninstall the unrecognized USB device.

Disconnect radio

Install software

Connect radio to USB and power up

If Windows asks to install drivers, point it to the folder where you unpacked the Icom installation.

Let Windows find the USB and sound drivers.

Enjoy.

422. question

Yahoo group: PCR1500
Date: 2014-07-15 21:42:21 UTC
From: James M Kinney
Topic: 422 Message: 422

i just bought a used pcr1500, i have a pcr1000 that works great. however the 1500 does not seem to function on AM,CW.SSB,WFM.
just normal FM. also does not seem to work below 100 mhz. does the 1500 have a eeprom like the 1000 that might be corrupted ?
i did notice the front end sensitivity was not t as hot as the 1000. i added a wingard LNA100 ultra low noise preamp, what a difference. it has a 1 db noise figure with 20db gain...been a ham for 30 years and was a motorola radio tech for last 20 years. the board has a lot of surface mount parts and lsi ics, not much chance of me fixing it..any help would be appreciated.

jim K8MOT (good on QRZ.com)

ps: thanks for letting me in the group..

425. Icom R1500 Remote Head Rotary Encoder

Yahoo group: PCR1500
Date: 2014-09-28 17:25:08 UTC
From: de.k0lgi@...
Topic: 425 Message: 425

Recently I have noticed the R1500 encoder that allows frequency and several other receiver functions to be changed, has become intermittent in its normal operation.

In other words, as an example, when a stored frequency is being changed using the encoder, it usually fails to do so without trying it several times before it is successful.

Not having a schematic or documentation of the remote head is of concern also as there may be some insight as to what is required to fix or replace the encoder.

Any suggestions as to the repair or troubleshooting of this issue would be appreciated.

From: k5ess.nothdurft@...
Topic: 425 Message: 427

I've just uploaded the Service Manual for the ICOM IC-R1500 and IC-R2500. The R1500 schematic is on page 11-7. It appears that it's an optical encoder but looks pretty complex judging from the drawing on page 7-2. Part numbers are listed on the preceding page. Don't know if or how easy you can get ICOM replacement parts.
Mike - K5ESS

428. Re: Icom R1500 Remote Head Rotary Encoder

Yahoo group: PCR1500

From: de.k0lgi@...
Topic: 425 Message: 428

Thanks Mike for the schematic and the Icom recommendation for repair service or available parts availability.

Since the R1500 is becoming (regretfully) an older design not produced any longer, I will check to see if it will continue to be supported by Icom.

The response received today from Icom parts, said there is no longer a replacement part for the Icom R1500 remote head rotary encoder unfortunately.
Lacking information as to the original source of the switch manufacturer if other than Icom, is another issue in finding a replacement.

430. About control software.

Yahoo group: PCR1500
Date: 2014-11-30 21:22:17 UTC
From: michel.morin44@...
Topic: 430 Message: 430

Is there a consensus about what is the best control software to use with a PCR1500 or is it very diversified? One thing I want to do absolutely is to record channels while I am away and the channel opens. Is the Icom software the only one to do that or is the function available in another software? Another function I need is for the software to save in memory the channels where there is activity. Thanks for your suggestions.
Mike.

Aug 30,2014 - -----: D-Star Caller Status "UR?" and "RPT UP" now Shown.
Sep 16,2014 - Fixed: CTCSS/Dual CTCSS Search for PCR-1500/2500.
Sep 17,2014 - Added: Dual Squelch Display Status.
Sep 20,2014 - Fixed: Display of Dual DTCS Squelch Status Color.
Sep 20,2014 - Fixed: Display of Dual CTCSS Squelch Status Color.
Sep 20,2014 - Fixed: Display of Dual Voice Squelch Status Color.
Sep 20,2014 - Fixed: Using Dual DTCS Squelch.
Sep 20,2014 - Fixed: Using Dual CTCSS Squelch.
Sep 20,2014 - Fixed: Using Dual Voice Squelch.
Sep 23,2014 - Fixed: DTMF now Enabled for Main Receiver on a 2500.
Sep 23,2014 - Fixed: Using DTMF on 1500/2500.
Sep 23,2014 - Added: About Dialog now shows if Dual DTMF is Installed on
a 2500.
Sep 24,2014 - Fixed: Saving Dialog Window Position when Closing and
Minimized.
Sep 24,2014 - Added: Clear Current History function to Main & Dual DTMF
Display.
Sep 24,2014 - -----: Increased Main & Dual DTMF Display to 14 Characters.
Sep 25,2014 - -----: CTCSS and DTCS Searches will Now Only Work when in
Manual Mode.
Sep 25,2014 - -----: Scan Resume Now Sets DTCS Tone from Current Channel.
Oct 12,2014 - Fixed: Displaying CTCSS or DTCS Tone Frequency in Status
Panel During Scan.
Oct 12,2014 - -----: Changed Verson Number of TrunkPCR to 1.0...
Nov 03,2014 - Fixed: The DV Callsign Was Appended to Itself Each Time The
Bank was Switched.
This Created a Long String of Text that was Sent to
the PCR, Causing a
BIG Delay while Scanning as the String Kept On
Growing.
Nov 10,2014 - Added: Registration Information Can Now Be Copied to the
ClipBoard for Pasting.

Nov 12,2014 - Added: Clone Operation For PCR-1500 & PCR-2500.
Nov 16,2014 - Added: D-Star Messages Now Shown in Main Display (Besides in StatusBar).
Nov 18,2014 - Added: Duration of D-Star Message Display Setting (1 to 60 Seconds) After Call Ends.
Nov 22,2014 - -----: Changed COM Port Initializing / Startup.
Nov 22,2014 - Added: Detection of USB Power Failure for PCR-1500/2500.
Dec 04,2014 - -----: In COM Port Settings, "RAISE DTR" MUST BE Enabled for PCR 1500/2500 Cloning!

Version 1.00.290 Released 12/08/2014

IMPORTANT: If you have Upgraded ICom's Driver to Version 2.20, then you will need
to Check the [Ignore CTS] CheckBox in the COM Port Selector BEFORE Clicking the
[Power] Button...

Jay

432. PCR Pro version 1.15.285 Now Available

Yahoo group: PCR1500
Date: 2014-12-23 23:13:51 UTC
From: Jay
Topic: 432 Message: 432

PCR Pro version 1.15.285 Now Available for Downloading from the Homepage:
http://www.fiftyonefiftysystems.com/PcrPro/PcrProDwnld.html

This update has 10 Fixes, 8 Additions and 7 Changes...

Aug 09,2014 - Fixed: Initilaizing D-Star & P-25 Dialogs.
Aug 09,2014 - Fixed: D-Star - Decoding a new NMEA Message Format.
Aug 21,2014 - Fixed: D-Star - Reporting Emergency Status.
Aug 21,2014 - Fixed: D-Star - Displaying Lat & Lon Coordinates of UnKnown
Caller.
Aug 27,2014 - Fixed: Bug in Comm Routines for Commands with length > 5.
Aug 30,2014 - -----: D-Star "EMR" and "BRK" Messages now Shown Correctly.
Aug 30,2014 - -----: D-Star Caller Status "UR?" and "RPT UP" now Shown.
Sep 16,2014 - Fixed: CTCSS/Dual CTCSS Search for PCR-1500/2500.
Sep 17,2014 - Added: Dual Squelch Display Status.
Sep 23,2014 - Fixed: DTMF now Enabled for Main Receiver on a 2500.
Sep 23,2014 - Fixed: Using DTMF on 1500/2500.
Sep 23,2014 - Added: About Dialog now shows if Dual DTMF is Installed on
a 2500.
Sep 24,2014 - Fixed: Saving Dialog Window Position when Closing and
Minimized.
Sep 24,2014 - Added: Clear Current History function to Main & Dual DTMF
Display.
Sep 24,2014 - -----: Increased Main & Dual DTMF Display to 12 Characters.
Sep 25,2014 - -----: CTCSS and DTCS Searches will Now Only Work when in
Manual Mode.
Sep 25,2014 - -----: Scan Resume Now Sets DTCS Tone from Current Channel.
Nov 03,2014 - Fixed: The DV Callsign Was Appended to Itself Each Time The
Bank was Switched.

Topic: 419 Message: 433

While on topic, my PCR1500 doesn't seem to be handshaking with my computer, I was using an non-OEM USB cable as I cannot locate the original one. Is it really a big difference in having an ICOM specific USB cable?

Hello Gary

I believe the primary difference is that the Icom USB cable supplied with the R-1500 is fully shielded to help negate coupling of unwanted PC noise radiating from it.

I located one online from Taiwain and having it sent so I have an OEM back on it again. By the way, as I was recently freaking out when my PCR1500 wasn't handshaking with my PC and thought I did something wrong. I had accidentally reconnected it to a lower amp 12v wall wart and although it powered up, there apparently wasn't enough power to support the USB connection! Just an fyi if you ever need to troubleshoot such an issue!

I would recommend using a TRIPPLITE usb-to-serial adapter. We use these at work for software development, and they never give us problems. In fact, the TRIPPLITE manual explains why most serial converters do not work (voltage levels and delays in communicating changes in the flow control signals), and how their adapter achieves excellent capability by dealing with these issues.

437. no audio on Side Band

I just did a FIRMWARE update the a CONTROL software reinstall. The top of the control panel now says PCR1500 instead of PCR2500. Fixed a couple of problems, mostly recognizing the USB port. All modes work.

WARNING ! DO THE FIRMWARE UPDATE AT YOUR OWN RISK !

YOU WILL GET A COUPLE OF RED COLORED WARNINGS.
FOR GODS SAKE DO NOT INTERRUPT THE POWER. YOU WILL HAVE TO SEND TO ICOM FOR REFLASHING IF YOU BLOW IT.

it is a neat radio, and updates are found on ICOM support site.
Read the file names closely to get JUST the 1500 control software.

If you are technically inclined, take it apart and reseat the 2 flex cables between the controller and the receiver. DO THAT AT YOUR OWN RISK ALSO ! They oxidize and get flakey !

I also have the PCR-1000. It is a little more sensitive than the 1500. I use a broadband preamp on the 1500. A big help.

Good luck ! Remember the "OWN RISK" statement.....

441. ! Importing CSV files... finally!

Yahoo group: PCR1500
Date: 2017-12-03 15:53:45 UTC
From: n3ue@...
Topic: 441 Message: 441

Still looking for an answer????
Had my PCR1500 since they came out, like way back when...
Finally gave up on trying to import a CSV file....
Until....
Today!
Thought I would give it one last try...
And here is what works....
IN EXCEL...
open an existing exported from the PCR bank...
paste your data to match the column descriptions... exactly...
Here is the problem...

Column A, format cells to Custom, NEW, "00" (no quotes, just Zero Zero.)
Column D, format cells to Number, and 6 DECIMAL PLACES.
Column F, format cells to Number, and 6 DECIMAL PLACES.
Column O, format cells to Custom, NEW, "000" (no quotes, just Zero Zero Zero.)
And save it as CSV.
BUT if you re open that same file in Excel again, the formatting will be lost again,
so save it as a excel format for a template.
Thats it!
